### Project overview

**Project  
name**                Manor Farm Third  
                             wire upgrade-  
                             Chobham

---

**Project  
description**        Upgrading of a HV  
                             third wire between  
                             two existing wires  
                             a total of 5 spans.  
                             Also adding a pole  
                             to an existing  
                             transformer  
                             position to make a  
                             'H' pole structure  
                             and increase  
                             transformer to  
                             100KVA.

---

**Tallest pole  
height**              11 metres

---

**Plan  
reference**            FBJ515

---

**Do you know  
when you  
are  
intending to  
start work**        No

**on this  
development  
?**

---

**Plan  
information  
documents**      Details of  
transformer  
upgrade.  
Upgraded spans  
shown in pink.  
Larger overview

---

**Have you  
submitted a  
CPO which  
is related to  
this project  
of work?**      No

### **Asset information**

**Standard  
specification  
reference  
number**      FBJ515-Manor  
House

---

**Line voltage**      11kV

---

**Line length**      450 metres

---

**Are you  
adding or  
replacing  
poles?**      Yes

---

**How many  
poles are  
you adding?**      1

---

**How many  
poles are  
you  
replacing?**      0

---

**Comments  
on poles**      Additional pole 6  
foot away from the

**being added or replaced?**

pole labelled 'Pig farm Sandpit Hall' on design document. This is to upgrade to a 'H' pole structure so a larger transformer can be sited in between the poles. Excavation will be carried out with a pole auger to minimise the affected area.

---

**Are you adding or replacing overhead lines?**

Yes

---

**Comments on overhead lines being added or replaced**

Works will involve upgrading of 5 overhead spans a total of 450 meters. The existing overhead line will be isolated to work on it safely. Drum trailers will carry the conductor into the fields for running the cable efficiently. These will be towed by off road vehicles and MEWPS. Once the conductor is ran out it will be brought to tension using the appropriate LOLER tested equipment. Once all work is carried out the overhead

line will be made live again.

Are you removing any existing equipment as part of this project?

No

Are the works to be carried out on an existing asset?

Yes

General comments

No

## Location

[Hide](#)

## Routes

**Route A**

<b>Easting</b>	<b>Northing</b>
498643	162243
498544	162081
498571	161826

**Works Overview**

**Are excavation works or vegetation clearance required?**  No

**Are you using pre-existing access routes and/or storage sites?**  Yes

**Sensitive area check**

**Tolerance required**  No

**Sensitive areas the route passes through**

- SSSI Impact Risk Zones (England)

### Sensitive area review

**Other areas the route passes through**

**Environmental and archaeological documents**

Magic map capture showing SSSI impact zone and LPA's responsibility to inform natural England.

**Poles/lines within sensitive areas**

There are poles within the sensitive areas

### Parishes

**Parishes**

Chobham (Surrey)

## Supporting information

[^ Hide](#)

### Supporting questions

**Have all wayleaves been obtained?**

No

**Comments about why wayleaves have not been obtained**

In progress

**Complies with Continuity Regulations 2002**

Yes

### Screening fees

**Is this project subject to an EIA development ?**

No

**Fees applicable to your application**

Assets with line voltage of 132kV or less: £402.50
