All drainage information is indicative and must be confirmed on site prior to commencement.

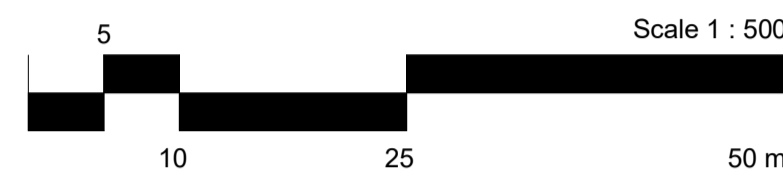

Photo 4
Looking Southwest towards the Greenhouses / proposed site for PV Panels from the entry point into the side garden.

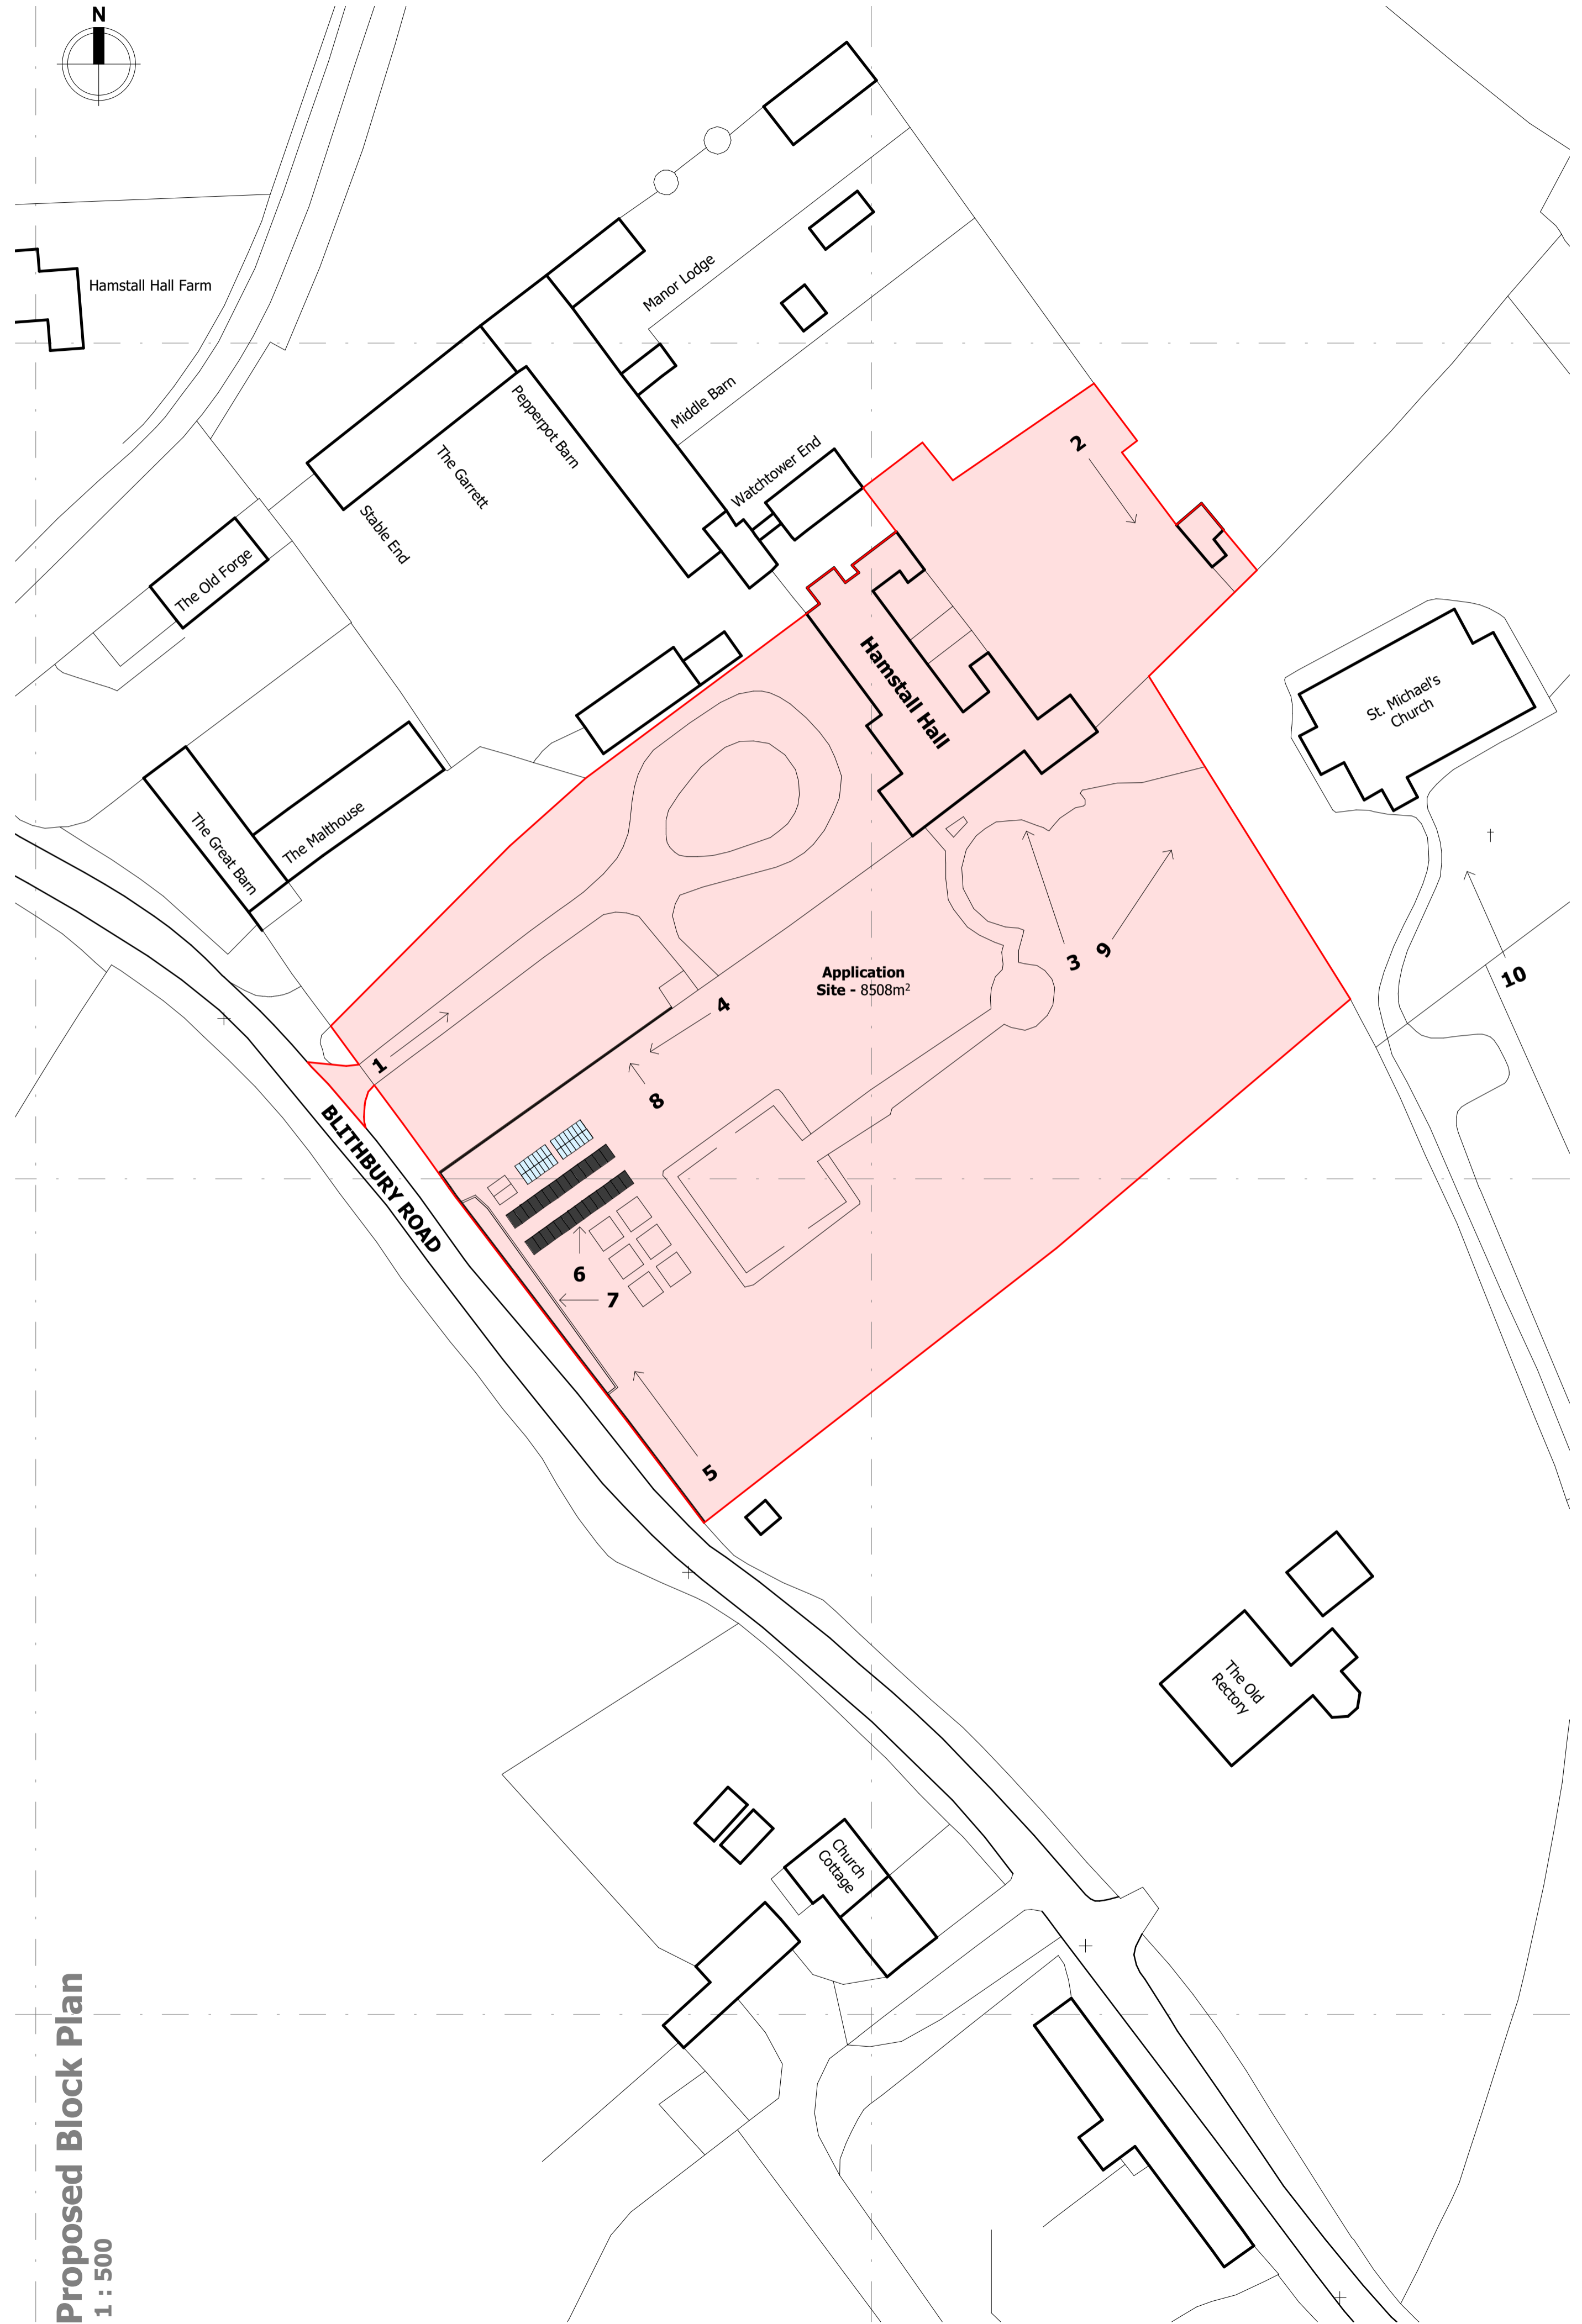

Photo 3
Looking North towards Hamstall Hall in the back part of the 'side garden'. Dense planting separates the front / back parts of this walled garden. To the right we see a remainders of the original C16 Hamstall Hall. This was the described as the "gabled bay facing south" and it is the most aesthetically pleasing (remaining) aspect of the Hamstall Hall site.

Photo 2
Within the rear garden at Hamstall Hall. Looking towards a surviving Tower from the original C16 Hamstall Hall. This grass area would have formerly been internal floor space within the Hall making it likely to hold archaeological remains and thus, an unsuitable site for the PV proposals. (Backdrop St. Michael's Church).

Photo 1
In the modern day this driveway leads to the principal elevation of Hamstall Hall as we see it (C21) from Blithbury Road. This is thought to date from mid C19 - early C20 based on Historic Maps.

Proposed Block Plan
1 : 500

Photo 5
In the 'Walled Garden' alongside Blithbury Road. In the photo we can see some modern additions, some raised planting beds, a timber 'potting shed' and two greenhouses. The proposals are to be located alongside the greenhouses in an area which receives good levels of sunlight. (Photo taken 21-09-23 at 10:49AM).

Photo 6
Closer view of 'Photo 5'. In the distance beyond the dense vegetation which separated the 'front' and 'back' areas of the 'side garden' we can see the Spire of St. Michael's Church. This photo is taken in the exact site of the proposed PV Panels. Analysis of the site has found this to be the most suitable location for these modern additions.

Photo 7
The 'Garden Walls' separating the 'side garden' from Blithbury Road. These are historic red brick walls which exhibit mixed brick bonding. There is some evidence of Flemish Bond, some evidence of 'English Bond / English Garden Wall Bond, some Stretcher Bond' all capped with a decorative brick coping.

Photo 8
The 'Garden Walls' as described in 'Photo 7'. These are Grade II Listed and have evidential, historic and aesthetic significance. Condition is fair given its age, although some aspects are poor and repairs have been carried out in multiple phases.

Photo 9
From the back part of the 'side garden'. In this photo we can see the original C16 bay of Hamstall Hall and the C14 Church Spire in the background. We can also see the dense vegetation which separates St. Michael's Church from the application site.

Photo 10
The Principal Elevation of St. Michael's Church (Southeast Elevation). This is well shielded by dense vegetation between the application site.
