1 EXECUTIVE SUMMARY

This energy statement has been prepared to support a Full Planning application for the construction of a New Dwelling at Wheal Down House, Marazion TR20 9NY.

This energy statement is used to demonstrate how the property has been designed to prioritise a low energy and sustainable living environment through the inclusion of;

- ✓ highly insulated external elements
- ✓ energy efficient space heating
- ✓ the use of low and zero carbon energy systems

which will have a positive impact on the local environment and meet the technical requirements of Cornwall Council Planning Policy SEC1

Note: figures used in this statement derive from calculations produced by SAP 10 modelling software.

2 INTRODUCTION

EAC South West is an established 'On-Construction SAP / EPC' energy assessment and building regulation compliance consultancy has been instructed to provide this report to assist relevant parties in understanding the design concept for the buildings energy consumption and performance.

A SAP calculation can only be prepared by an accredited OCDEA SAP Assessor. EAC South West holds this qualification and has used Elmhurst Energy Assessment software in the preparation of this energy statement.

The Energy Strategy for this development has taken into account Lean, Clean and Green factors to minimise energy demand, by adopting;

- ✓ Be Lean: use less energy and optimise the most suitable passive measures
- ✓ Be Clean: use of the most suitable energy efficient heating system
- ✓ Be Green: measures for carbon emission savings

To show compliance with Policy SEC1, the report is based on results obtained with use of the Governments Standard Assessment Procedure (SAP) which is used for calculating the energy performance of dwellings and CO₂ emissions.

3 PLANNING POLICY

Energy statements are a mandatory requirement for applications relating to a new build home (not for homes formed by a change of use).

Cornwall Council Climate Emergency Development Plan Document Planning Policy SEC1 Sustainable Energy and Construction Part 2b focuses on the energy use of new build homes in a drive towards net zero operational energy demand through three elements of policy.

1. Space heating energy threshold: 30kWh/m²/year
2. Total energy threshold: 40kWh/m²/year
3. Renewable Energy Requirement +> than the total energy demand

The council’s Planning Policy SEC1: Energy Summary Tool – sap v2 is used to summarise results.

4 THE DESIGN

A SAP 10 calculation has been used to model the dwelling and the data produced has been used to show compliance with Planning Policy SEC1, and the Building Regulations Part L.

The design: includes measures that will minimise energy consumption, reduce CO₂ emissions below that of the Building Regulation Target Emission Rate (TER) and also incorporate low and zero carbon energy generation to ensure that the property meets the energy efficiency demands of Planning Policy SEC1 and the technical requirements of the Building Regulations Part L.

Construction elements: the proposed development has included improved insulation standards, exceeding the Building Regulation: Part L requirements to retain heat and maximise thermal comfort in living spaces and ensure a good quality of life for occupants.

Element	Measure	Proposed	Part L
Ground Floor	W/m ² K	0.1	0.18
External Wall	W/m ² K	0.1	0.18
Roof	W/m ² K	0.1	0.15
Openings	W/m ² K	0.8	1.40

SAP calculation, Thermal and Building Regulation Compliance needs

Solar Gains: the design and orientation enables the property to benefit from solar gains, which make a significant contribution towards energy efficiency and reducing energy requirements during winter months.

Building Regulations Part O: an overheating assessment of the dwelling has been completed and confirms that the design complies with Part O guidance for glazing, openings and natural ventilation requirements.

Energy Efficient Measures

Lighting: low energy lighting (LED) shall be fitted throughout the property.

Heating and Hot Water: the property will use a ground source heat pump to collect low temperature heat from the ground, and to then concentrate that heat to a usable temperature for space heating and hot water.

Although the heat pump will use electricity to run the pumps, the energy coefficient of performance is generally 3 'or more', meaning that for every 1kWh of electricity used, 3kWh 'or more' of heat is generated.

Element	Measure	Proposed	Part L
Space Heating Emitter	Part L 2022	Proposed flow temp 35c	Max flow temp 55c
Heating Controls	Part L 2022	Time and temperature zone control	Time and temperature zone control
Mechanical ventilation with heat recovery	Part L 2022: SFP 'Specific Fan Power'	SFP 0.5 and heat recovery 81%	SFP 1.5 and heat recovery 73%

The heating system will be run in tandem with a Mechanical Ventilation and Heat Recovery System to ensure that heat retention is maximised, and that energy input will be minimal.

5 LOW AND ZERO CARBON ENERGY SYSTEMS

The design has significantly reduced energy use and carbon emissions through enhanced fabric and energy efficient measures, and it is proposed to make the property more efficient with the inclusion of a ground source heat pump to serve heating and hotwater requirements.

Renewable Energy Systems: an assessment of the options available to reduce CO₂ emissions, and it is proposed for a heat pump to be installed that will serve the heating and hot water demand of the property.

Ground Source Heat Pump: has been included in the design. The low carbon green energy heating system will provide enough power for the space heating and hot water demands of the dwelling

Solar Photovoltaics (PV): the proposals include a PV installation.

The PV system is expected to achieve 6054 kWh/year and an additional benefit of PV is that any surplus energy generated will be available for export to the national grid, and therefore further reducing the development carbon footprint.

Ventilation: the need to provide additional ventilation through a mechanical ventilation with heat recovery (MVHR) will be installed to provide a constant supply of fresh filtered air, whilst heat is recovered and circulated back into the property.

Building Regulations Part G 17k. Water Efficiency: the potential consumption of wholesome water by persons occupying a dwelling should not exceed 125 litres per person per day.

A water efficiency calculation has been carried out in accordance with the methodology set out in Part G and confirms that the design complies with water efficiency requirements.

7 CONCLUSION

- There appears to be no technical problems with the design proposals
- The development accords with the guidance set out in the [Cornwall Council Planning Policy SEC1 Sustainable Energy and Construction Part 2b](#)
- The design is compliant with relevant building Regulation requirements
 - Part G 17k. water efficiency
 - Part L. conservation of fuel and power
 - Part O. overheating
- The design acknowledges the constraints and opportunities provided by the site and location
- No offsetting payment is necessary with this scheme
