

Soil Management Plan

10 Riverside Close, Liss, Hampshire, GU33 7AE

The construction soil management plan controls the risk of losing, damaging or contaminating valuable soil resources, whether the soil will be retained for future landscaping on-site, or used or sold off-site.

The owners of the property are taking responsibility for soil management throughout the development

In this instance all topsoil and subsoil is expected to be reused on site, surplus clay is to be passed to a soil reclamation company for disposal. Care will be taken when creating landscapes, habitats or gardens to ensure the soil is brought back to full performance

The amount of soil is expected to be minimal by utilising construction methods for the foundations including pads and ground beam for just this reason to minimise waste and relocation.

Kind Regards

Adam Humphrey
