**SuDs STRATEGY AND FLOOD RISK MANAGEMENT
FOR PROPOSED DEVELOPMENT
AT
8, WILLIAMS WAY, RADLETT, HERTS WD7 7EZ.**

JANUARY 2024

Basic Site Layout

 <p>SUITE 1 10 KENNINGTON PARK PLACE LONDON SE11 4AS +44 (0) 20 4530 8000 www.takstructures.co.uk</p>	Project:	8, Williams Way, Radlett, Herts WD7 7EZ	TAK Project Ref:	20925
	Document:	SuDs Strategy and Flood Risk Management Document	Issue Date:	22 nd Jan 2024

SuDs STRATEGY

Drainage Hierarchy:

The Suds strategy for this refurbished property is based on the following SuDs Hierarchy:

It is assumed that the existing property already discharges its surface water to a Thames Water sewer within Williams Way

1. **Re-Use of Rainwater**
2. **Ground Infiltration**
3. **Discharge to Watercourse**
4. **Discharge to Surface Water Sewer**
5. **Discharge to Combined Sewer**

1. Re-Use of Rainwater:

The existing rainwater discharges to a surface water sewer within Williams Way and therefore this method of re-use has been discounted.

2. Ground Infiltration:

Using information taken from the British Geological Survey we have noted the underlying strata to 8, Williams way, to be 'Lambeth Groups' – which comprise Clays, Silts and Sands and are a series of impermeable, high volume change cohesive soils.

Soakaways/Infiltration –

Given the nature of the underlying sub-strata noted within the British Geological Survey information, discharge of surface water via any form of infiltration has been discounted.

Permeable Paving – From drawings provided it appears that the front area of the property is to be re-laid using herringbone pattern paving. It is therefore, proposed to construct these external areas using permeable paving construction. However, the paving will be lined to avoid any infiltration and provide an amount of storage which will then be discharged into the Thames Water Sewer in Williams Way via a new onsite manhole with a 'Hydrobreak' flow restrictor. The discharge rate into Willaims Way from the permeable paving storage is to be limited to **5.0 l/s**.

 <p>SUITE 1 10 KENNINGTON PARK PLACE LONDON SE11 4AS +44 (0) 20 4530 8000 www.takstructures.co.uk</p>	Project:	8, Williams Way, Radlett, Herts WD7 7EZ	TAK Project Ref:	20925
	Document:	SuDs Strategy and Flood Risk Management Document		Issue Date: 22 nd Jan 2024

The make-up of the permeable paving is noted below:

MAIN CAR PARK CONSTRUCTION:

80mm THK. MARSHALLS 'TEGULA PRIORA' OR SIMILAR BLOCK PAVING (JOINTS FILLED WITH 6mm AGGREGATE) ON,
50mm OF 2mm-6mm SINGLE SIZE CLEAN CRUSHED STONE TO BS EN 13242: 2002 ON,
INBITEX GEOTEXTILE OR SIMILAR APPROVED ON,
100mm UPPER SUB-BASE MATERIAL TO BE GRADED 5mm-20mm TO BS EN 13242: 2002 ON,
SC INTERGRID OR SIMILAR APPROVED GEOGRID ON,
350mm OF 10mm-63mm LOWER SUB-BASE MATERIAL TO BE GRADED IN ACCORDANCE WITH BS EN 13242: 2002 ON,
SC INTERGRID OR SIMILAR APPROVED GEOGRID ON,
SC MEMBRANE SANDWICHED BETWEEN PROTECTIVE FLEECE TO MANUFACTURERS SPECIFICATION.
MEMBRANE TO BE FULLY LAPPED AND TAKEN UP EACH KERB FACE.

LINED PERMEABLE PAVED CAR PARK CONSTRUCTION.

(1:20)

Proposed Storage Calculations:

From current preliminary information the area of permeable paving to the front of the property appears to be in the region of 135m².

The Storage zone within the permeable make-up is 450mm of sub-base material, therefore providing a storage volume of 135 x 0.45 = 60.75m³

Assuming 30% voids within sub-base, actual storage quantity is 60.75 x 0.3 = 18.2m³

We have utilised Micro Drainage Source Control facility to produce a storage requirement along with half drain times using the above information which show results for the following worst-case storm event of 1 in 100 +40%.

The area of hard surfaces including external parking within the site has been calculated at 600m² (0.06ha).

Therefore, when using the Micro Drainage software, we have used the following information to assess the storage capacity of the permeable paving.

 <p>SUITE 1 10 KENNINGTON PARK PLACE LONDON SE11 4AS +44 (0) 20 4530 8000 www.takstructures.co.uk</p>	Project:	8, Williams Way, Radlett, Herts WD7 7EZ	TAK Project Ref:	20925
	Document:	SuDs Strategy and Flood Risk Management Document	Issue Date:	22 nd Jan 2024

Using a nominal depth of 0.45m the value of the tank area to use within Micro-drainage Calculations = $18.2/0.45 =$
40.4m²

Calculations are shown in Appendix-2.

Attenuation Tank Storage:

The existing property discharges its rainwater to the surface water sewer within Williams Way. This along with the likely undermining of existing foundations during the relevant excavations mean that the use of Attenuation Tank storage has been discounted.

3. Discharge to Watercourse

There are no public watercourses in close proximity to the site and therefore this method of discharge has been discounted.

4. Discharge to Surface Water Sewer

The existing property already discharges its rainwater to a surface water sewer In Williams Way and therefore this method of discharge is considered viable. The new permeable paving will discharge via a Manhole with a 'Hydrobreak' to restrict flow to **5.0 l/s**.

5. Discharge to Combined Sewer

There are no combined sewers in close proximity to the site and therefore this method of discharge has been discounted.

Flood Risk

Having reviewed the current information available form the Environment Agency, the property is noted as being within Flood Zone-1. Therefore, there is no requirement for a Flood Risk Assessment.

The maps within Appendix-1 show that there are no risks of flooding from:

- (i) Rivers and Seas
- (ii) Surface Water
- (iii) Reservoirs.

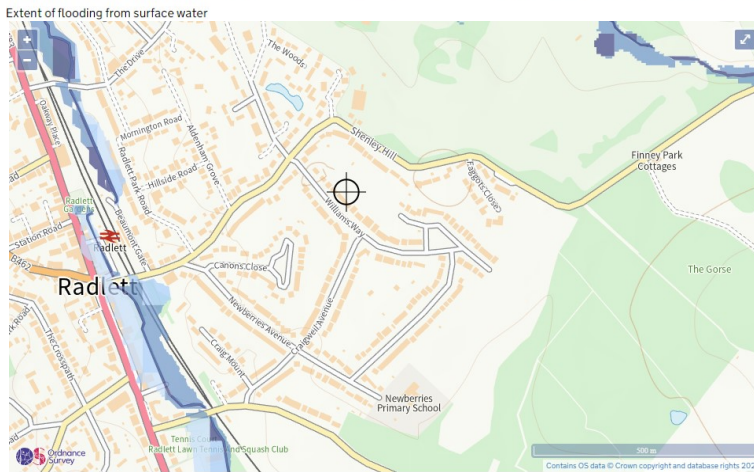

Appendix-1 shows the relevant maps taken from the Environment Agency website.

Thames Water Consent:

Thames Water Consent will be required for the connection of the permeable paving to the Surface Water sewer in Williams Way

 <p>SUITE 1 10 KENNINGTON PARK PLACE LONDON SE11 4AS +44 (0) 20 4530 8000 www.takstructures.co.uk</p>	Project:	8, Williams Way, Radlett, Herts WD7 7EZ	TAK Project Ref:	20925
