

- EXISTING ELECTRIC/ LIGHTING KEY:**
- Double S.S.O. at low level height
  - Double S.S.O. at above counter height
  - High level heat detector
  - PIR
  - CCTV Camera
  - Flourescent baton
  - Pendant light
  - Recessed downlighter
  - Vent grille

Britannia Refresh Recirculation Unit

The Britannia Refresh Recirculation system is ideal for locations where venting to the atmosphere would be difficult or costly. It provides a safer, more comfortable working environment. The unit is free-standing unit, meaning it can be installed quickly and easily, with minimal disruption.

The Britannia recirculation unit comprises an extract housing, along with a top-mounted filtration section that houses a powerful, efficient fan unit. Air is drawn through the low level filter housing before passing through four filtration stages to remove grease, fine particles, smoke and odours. Ensuring air is clean and safe
