

Image of tree 2019

Image 1. View of tree from the west from within the ground of Oak Tree House.

Image of tree 2024 – increasingly asymmetrical growth of bulk of tree with > 70% growth directed over Trevine garden as directly competing with existing conifers for space and light within host garden, leading to excessive growth over our garden as tree seeks light. When in leaf through Spring and Summer this leaves Trevine garden in deep shade through the afternoon, having previously been a bright sunny garden.
