

Statement Regarding Trees Within 15m Of Proposed Construction

Regarding trees within 15m of project that are more than 75mm in trunk diameter, the nearest tree to the project is approx. 15m, however, the construction of the garages will be built on a raft base and will not interfere with any of the surrounding foliage/trees and will not require intrusive foundations that will affect any root system within the garden.

The construction is in fact being conducted on a lawned section and once completed additional landscaping introductions will be made to rebalance the garden. This will help to soften some elements of the enterprise and will also provide additional natural cover for wildlife.
