

ADDITIONAL INFORMATION - MATERIALS

We were unable to find any relevant information prior to submitting this application for our new roof covering, and as the work is a matter of some urgency we did not want to risk a rejection which would incur further delays.

In light of this we have included two options with regards to the roofing felt we propose to use,(section 9 - Materials) in the hope that you could accept one of these suggestions and dismiss the other.

The existing felt is F1 which was installed in the 1980's prior to the building being listed. Ideally we would prefer to use the newer breathable membrane if this is acceptable.

Please can you inform us of your decision so that our roofing contractor can order the relevant materials. Thank you.
