MANAGEMENT OF EXISTING HEDGEROW

The existing hedgerows shown on this plan will be maintained and allowed to grow through hedgerow management to provide an effective screen for the development. The existing hedgerow will be restocked to carry out effective 'gapping up'.

NEW HEDGEROW PLANTING SPECIFICAION:

A new hedgerow is proposed around the development.

This hedgerow planting shall incorporate at least seven of the rural native hedgerow species listed below:

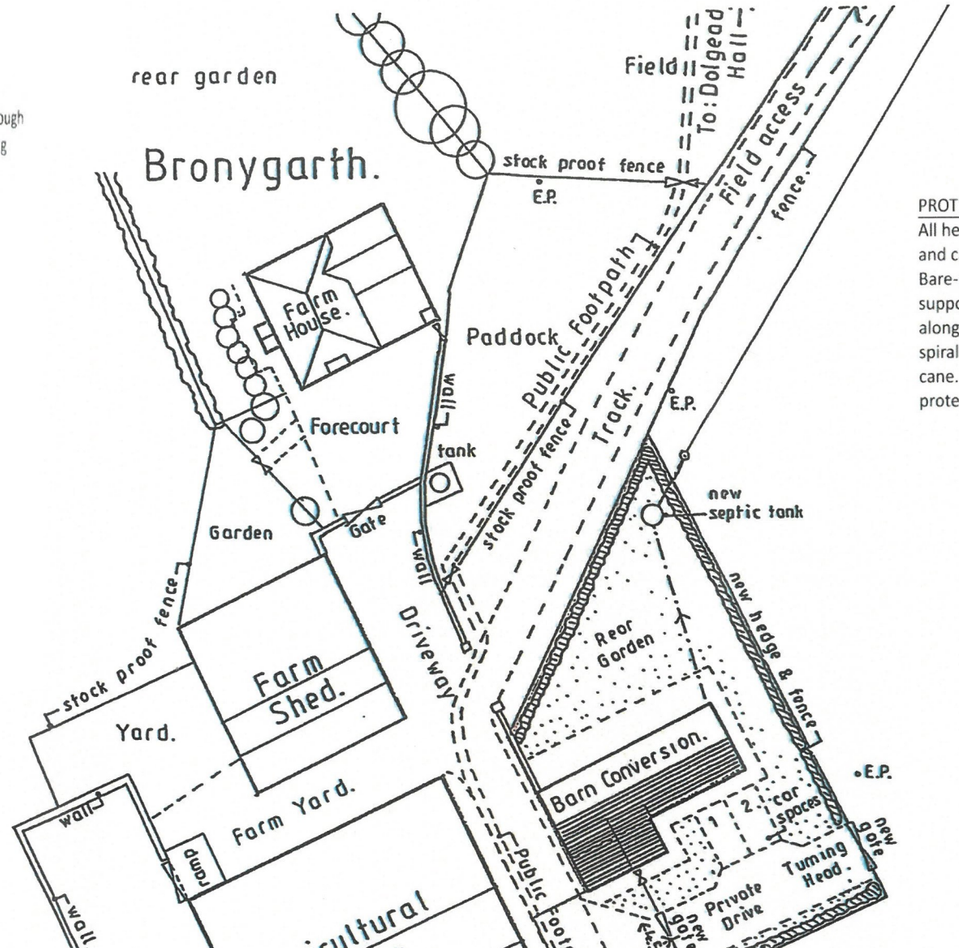
Main Matrix (transplants/quicks): 80% of planting stock
Hawthorn (Crataegus monogyna)
Blackthorn (Prunus Spinosa)
Interplant (whips/transplants): 20% of planting stock
Hazel (Corylus avellana)
Holly (Ilex aquifolium)
Dog Rose (Canina)
Field Maple (Acer Campestre)
Dogwood (Cornus sanguinea)
Spindle (Euonymus europaeus)
Wild Privot (Ligustrum vulgare)

HEIGHT OF HEDGEROW PLANTS:

The hedgerow plants will be approximately 40-60cm in height, plantedin two staggered rows 30 cm apart with between 4 to 6 plants per metre.

MAINTENANCE OF NEW HEDGEROW:

The hedgerow will be well maintained by ensuring regular weeding takes place, and any natural losses will be replaced within the first five years. The protective sundries will be checked twice a year to ensure they are securely fitted and will be replaced where necessary for at least 5 years.



PROTECTION FOR THE NEW HEDGEROW

All hedgerow plants will be protected with spirals and canes or tubex tree tubes and stakes. Bare-rooted stock will be planted by inserting the supporting cane approx. 25cm into the ground, alongside the plant, and wrap the clear spiral guard around both the plant and cane. The new hedgerow will be protected by a new stock proof fence.
