Tree Survey Schedules

Arbor Vitae Arboriculture

3rd January 2023

Key

Abbreviation	Explanation
TN	Tree Number: sequential number of the tree in order inspected.
Tag	Unique number on tag attached to the tree. NT = no tag. S = small tree or shrub (<75mm at 1.5m height). Gx.y = Grouped trees (x) (similar trees) with number of the tree within the group (y). X = Tree located on plan but not found on site.
Species	Tree species: Common English name (Botanical name)
H	Tree height: measured to nearest metre for trees over 10 m, or nearest 0.5 metres for trees up to 10 metres in height.
D	Stem diameter: measured at 1.5 metres above ground, to the nearest 10 millimetres. Trees with more than one stem are calculated as per BS5837:2012.
H/D	Height:diameter (slenderness) ratio. Exposed trees with a slenderness ratio over 40 are considered to be moderate risk of failure; over 50 = high risk.
AC	<u>Age Class:</u> Young (up to the first 1/3rd of expected height), Semi-mature (1/3rd to 2/3rds of expected height), Mature (close to expected ultimate height with rapid girth expansion), Veteran (a valued tree surviving beyond the typical age for the species), Dead.
V	Vigour (physiological condition) of the tree. N = normal F = fair P = poor D = dead
Condition	Observations, particularly of structural and/or physiological condition (e.g. the presence of decay, defects and pathological infections), as well as nuisances caused by the tree. Good = Full healthy canopy. Free from major cavities, wounds, pests or diseases. Moderate = Slightly reduced leaf cover, minor deadwood or isolated major deadwood. Early stages of decay/disease. Structural faults. Poor = Overall sparse leafing or extensive deadwood. Well established decay organisms. Structurally unsound cavities and or large wounds. Structural features prone to failure. Very Poor = Large areas of dead crown. Advanced decay. Structurally unsound. TBD = To be determined.
Recommendations	Management recommendations for the tree. 'NWR' = No work required.
U	Urgency of the recommended tree works (in months).
ERC	Estimated remaining contribution of the tree (in years).
RC	Retention Category, as per BS5837 (2012) Table 1. T = To be determined.
1B	Height and direction of first branch.
S (+N/E/S/W)	Crown spread: lateral distance from the tree centre to the canopy extent at each cardinal point.
C (+N/E/S/W)	Crown height: distance from ground to the start of the canopy at each cardinal point.
Bat	Based on observations of possible bat roosting features - this does not indicate the actual presence of bats, rather the possibility of the tree being used by bats. H = high likelihood of roosting feature. L = low likelihood of roosting feature. U = unknown.
RI	Recommended maximum time until the next tree inspection (in months).
RPA	Root Protection Area (square metres).
RPR	Root Protection Radius (metres).
