

Proposed Surface for PS2 (5 m x 3 m) GR14 Grass Reinforcement Mesh

- Suitable for domestic driveways or commercial parking needs for vehicles up to 7.5 tonnes (on stable ground)
- GR14 provides a permeable, reinforced grass solution for cars, trucks, cycles and pedestrians
- Mesh is laid and fixed directly to the existing surface - no soil removal or excavation required!
- Slip-resistant mesh structure which can also be improved by adding a thin layer of sand over the mesh to provide increased grip and traction
- Prevents grass wear, rutting and mud caused by cars and traffic
- GR14 provides an environmentally conscious alternative to impermeable paved surfaces where natural grassed traffic routes and driveways are preferred
- Ideal for use in Source Control applications as part of a Sustainable Urban Drainage System (SuDS)
