Dear Sir/Madam

**Re: Planning permission for fences at 14 Park Crescent, Brighton, BN2 7HN**

It is estimated that some 200,000 cats in the UK are killed on the road each year. This not only puts cats lives at risk but also the driver of the car. Cats are also increasingly at risk of being stolen, getting lost or trapped, attacked or picking up diseases such as feline aids. All of which cause a great deal of stress and upset to the owners of the cats involved.

Our objective at Katzecure is to keep cats safely contained in their own garden. This is achieved by positioning two three inch diameter, internally mounted poles (timber or aluminium) onto a garden fence or wall. When a cat runs up the fence to try and get a grip on the top, the pole will first rock and then spin preventing it from getting a hold and jumping over the fence.

For the system to be effective the fence height must be a minimum of six feet high. We extend the height using trellis extensions if necessary. Any potential jumping platforms, must also be a minimum of six feet away from the fence.

The challenge we have with securing the garden at 14 Park Crescent and the reason for the application for planning permission, is that the fence at the lowest level needs to be more than six feet high to stop the cat using the next higher level as a jumping platform to clear the lower fence.
