

Design and access statement.

A1546

For 9 Hungate Beccles NR349TT

The door we propose to change is a community door that service two flats. The existing door that is now in very bad condition and is now beyond repair is not the original door or style of the property.

As we are trying to retain the property's original look, we researched what style the original door would be and come to the conclusion the proposed design and materials was the best for this house.

As stated in the Waveney District Conservation Area Appraisal of this area . (*Caring for the historic environment is a dynamic process which involves managing change. This does not mean keeping everything from the past, but making careful judgements about the value and significance of buildings and landscapes.*)
