

Biodiversity Enhancements to be included in this project.

As a condition of this planning application there now is a policy requirement that the project includes biodiversity enhancements.

As such the new proposal must include a single bird nesting box RSPB approved and sited 1.5m above ground and on a north or nw or ne facing elevation on a sheltered side from rain and cats where possible.

A bird feed and water table is to be installed in the garden for winter bird feeding table minimum 1.5m height.

The perimeter boundary fence/wall must have an access hole 100x100mm in each corner at ground level to allow hedgehog migration passage.

These are to be installed on completion.

Regards

Andrew Pearson MCIAT
