

Daylight and Sunlight Assessment Van Diemens Terrace

The site layout and orientation at the site is nearly ideal for sunlight and daylight.

Other dwellings to the south are comparatively distant and the south side of the dwellings will be well served with an open aspect.

For the sake of privacy, no side windows have been placed in the dwelling, but well positioned roof windows, and the south facing windows and French windows, will provide good day lighting inside, not forgetting the roof windows which will bring natural light into the centre of the rear living rooms on the ground floor.
