## 1. INTRODUCTION AND CONCLUSION.

- 1.1. Currently the building is used as a changing room facility. It is proposed that the building will be converted into a community and worship hall. The acoustic output associated with the new use will also be far lower than those of the external sport activities and thus will not alter the local acoustic environment.
- 1.2. The site edged in red is far away from any residential areas. See image below. Therefore, there is enough acoustic separation not to warrant an in-depth noise impact assessment as the local acoustic environment is not changing.
