1. INTRODUCTION AND CONCLUSION.

- 1.1. The existing building is not changing in shape and therefore daylight and sunlight values will not change. There will be no additional overshadowing caused by the change of use. With the addition of some external glazing in the; community and worship hall, kitchen and office, the daylight factor within these areas will exceed their respective current levels.
- 1.2. A full daylight or sunlight assessment is excessive for this kind of application.
