## 1. INTRODUCTION

Core Geotechnics Limited (CGL) was instructed by Horizon Construction Bristol Ltd to carry out an investigation relating to proposed re-development at 11-15, Wade Street, Bristol.

The scope of the investigation was to establish ground conditions, the presence and nature of any contamination and to provide general recommendations for development.

The scope of investigation comprised:

- A desk study relating to the history and geo-environmental setting of the site
- Five dynamic sampled boreholes
- One dynamic probe hole
- One borehole sunk using a combination of dynamic sampling and rotary core drilling techniques.
- Geotechnical laboratory testing
- Contamination laboratory testing

This report presents the findings and comments accordingly.

## 2. SITE LOCATION AND GEOLOGY

### 2.1 Site Location and Description

The site is located on the corner of Wade St with St George St, Bristol, BS2 9DS as shown in Photo 1. The approximate Ordnance Survey co-ordinates for the site are 359760, 173510.

The site of the proposed development encompasses St Mark's Garage, a former vehicle repair garage and tyre sales, and an adjacent open area which was used for car sales. The site approximates to a square in plan shape with approximate dimensions of 25 x 25m. The site is bounded to the north-east by Wade Street, to the south-east by Great George's St, to the south-west and north-west by residential apartment blocks.

Photo 1 Aerial View of Site from Google Earth dated 2021 (site in red outline)

At the time of the investigation, the garage and car sales area were vacant. Photos of the site are shown in Photo 2 and 3.

Photo 2 View west inside garage

Photo 3 View west of site

Photo 4 View east of south-western end of garage

The garage is a steel portal frame structure with brick walls and metal roof sheets. The garage has a concrete floor slab which showed local areas of oil staining. The car sales area has a gravel surface. To the rear of the garage (south-western end) were several 45 gallon drums all indicated as motor oil (5W- 30) and a steel waste oil tank. Whilst some of the drums were empty others contained liquid (assumed to be waste motor oil). The drums were all removed by the clients representative during the period of investigation.

There were no below ground or above fuel tanks (as the garage operation was mainly repairs and tyre sales).

The site has a slight fall to the north-west, where the River Frome flows north-east to north-west in a culvert.

As a result of the sloping ground level, the south-western end of the garage walls are retaining in nature (with a fall of c1.00m from outside levels).

## 2.2 Geology & Coal Mining

Geological Survey data indicates that the site is directly underlain by made ground which in turn overlies the Redcliffe Sandstone Member of Triassic age. The Redcliffe Sandstone Member unconformably overlies Carboniferous Coal Measures strata at depth.

Geological extracts procured from an Envirocheck report are included as Appendix E.

Given the potential for coal mining in the area, a Coal Authority mining report was procured and is also reproduced in Appendix E. The report indicates that the site is not within the zone of likely physical influence on the surface from past underground workings. The report further indicates that there are no known coal mine entries within or within 20m of the boundary of the property.

The adjacent site to the north-west was investigated by CGL in 2014 with regard to the redevelopment of that site to the present apartment block. The investigation identified ground conditions comprising:

- Made ground of sandy, ashy gravel to 1.70/2.20m
- Soft and firm sandy clay and clayey sand to 4.80/4.90m
- Bedrock at 4.80-4.90m comprising weak red brown sandstone and extremely weak to weak mudstone, proved to 11.40m.
- Groundwater was recorded at around 3.20-3.40m bgl.

Borehole logs from that report have been presented in Appendix B.

### 3. PROPOSED WORKS

It is understood that the redevelopment of the site involves demolition of the garage and the construction of four-storey residential apartment block which will cover the whole site. A proposed layout plan is included as Figure 2.

Details of structural loads were not known at the time of investigation but are likely to be relatively high.

### 4. SITE HISTORY AND GEO-ENVIRONMENTAL DATA

#### 4.1 Site History

The history of the site was largely determined from an “Envirocheck” report commissioned from Landmark Information Group. The Envirocheck report incorporates historical Ordnance Survey and town plans covering the period 1884 to 2023, together with information relating to various geo-environmental databases. Historical map extracts are included as Appendix F. The maps present a snapshot in time and variations may have existed in-between editions that have not been identified.

The following review has been predominantly based upon the larger scale maps as these are easier to interpret.

Relevant information obtained from the historical maps is detailed below:

Date	Scale	Summary
1884	1:2,500	<ul style="list-style-type: none"> <li>The earliest available survey dating to 1884 shows Wade Street in its approximate modern day alignment.</li> <li>The site is shown to be occupied by several buildings (presumed terraced residential)</li> <li>A gum works (disused) is shown located 20m to the south-west of the site with an oil and colour works located further to the south-west</li> <li>The River Frome is located approximately 50m to the north-west of the site.</li> <li>A tannery is indicated 50m north of the site and an Oil and Dye works some 90m north.</li> </ul>
1884-85	1:500	

Date	Scale	Summary
		<ul style="list-style-type: none"> <li>A vinegar works is shown 130m north-west and a smithy is shown 110m east.</li> </ul>
<b>1896</b> <b>Historical building plan</b>	Unknown	<ul style="list-style-type: none"> <li>An historical building plan dating to 1896 shows buildings on the site as residential terraced units and a courtyard referenced as Milson Court.</li> <li>The buildings to the north-west is St Judes Mission House, a marine store and furniture and cabinet makers. Residential buildings appear to occupy the land opposite Great Georges St to the south-east and further to the south-west.</li> <li>The disused gum works is now shown as Frome Bridge Soap Works. Several tanks are identified within a courtyard area within the soap works</li> </ul>
<b>1903</b>	1:2,500	<ul style="list-style-type: none"> <li>Little change shown from earlier survey other than the soap works now appears to be identified as a brewery</li> </ul>
<b>1918</b>	1:2,500	<ul style="list-style-type: none"> <li>Little change shown on the site</li> <li>A small school is shown located on the opposite side of Wade Street</li> </ul>
<b>1951-52</b>	1:2,500	<ul style="list-style-type: none"> <li>The houses on the site appear to have been demolished along with those in the immediate adjacent land to the north-west and south-west. The site appears to be occupied by a building over its north-western half.</li> <li>Apartment blocks; Whitson House has been constructed on land to the south-west and Elton House on opposite side of Great Georges St to the south-east.</li> <li>Adjoining land to the north-east is occupied by a small rectangular structure.</li> <li>The brewery is no longer identified although a factory and paint and varnish works are identified some 120m to the south-west.</li> <li>A marble mosaic works and oil and chemical works are shown located in the vicinity of the former tannery some 50-100m north and north-east.</li> </ul>
<b>1961</b> <b>Historical building plan</b>	Unknown	<ul style="list-style-type: none"> <li>The site is shown to be occupied by a paperstore which is approximately the same location as the present garage (and thought to be the same building). The building is described as steel truss roof with skylights. There is a small building (shop?) adjoining the paperstore on its south-eastern elevation. The south-eastern half of the site is left vacant.</li> <li>The building on land to the immediate north-west is identified as a Municipal Lodging House</li> <li>The former brewery site some 20m or so to the west is variably occupied by a garage and various warehouses predominantly utilised for grain storage.</li> <li>A "sunk petrol tank" is identified within the garage some 30m or so west of the site.</li> </ul>
<b>1963</b>	1:1,250	<ul style="list-style-type: none"> <li>Paperstore identified as a warehouse.</li> <li>Former tannery site to the north now occupied by a depot</li> <li>Former garage 20m south-west is no longer identified</li> </ul>
<b>1972</b> <b>1971</b>	1:1,250 1:2,500	<ul style="list-style-type: none"> <li>Buildings to the south-west of the site have been demolished and are now identified as a car park. Former tannery site appears to have been cleared and is shown as an empty plot.</li> <li>A scrap yard and breakers yard are shown some 90m east.</li> </ul>
<b>1978-89</b>	1:1,250	<ul style="list-style-type: none"> <li>Little change shown on the site</li> </ul>

Date	Scale	Summary
		<ul style="list-style-type: none"> <li>• Apartment blocks appear to have been constructed some 30m west and a Salvation Army Hostel (as presently exist) is now shown occupying the land on the opposite side of Wade Street</li> <li>• Breakers and scrap yard 90m east, no longer shown after 1983</li> </ul>
1992-96	1:1,250	<ul style="list-style-type: none"> <li>• Little change shown from earlier survey</li> </ul>
2006	1:10,000	<ul style="list-style-type: none"> <li>• Little change shown from earlier survey</li> </ul>
2024	1:10,000	<ul style="list-style-type: none"> <li>• The structure –(presumed shop) on south-eastern elevation of the warehouse is no longer shown</li> <li>• Site and local environment shown essentially as it exists today.</li> </ul>

Reference to the timeline on Google Earth shows the site in 2020 when the building by the warehouse / garage still existed and before car sales occupied part of the site.

Local knowledge suggests that the garage services has occupied the former warehouse over only the past few years and that the building on south-eastern side was in use as a butcher's shop.

Google Earth Imagery dated 2020

## 4.2 Environment Agency and Regulatory Enquiries

The “Envirocheck” section of the Landmark report is included as Appendix G and has been reviewed in relation to the subject site and indicates the following:

## **Discharge Consents**

There are three active discharge consents located within 250m of the site. All relate to storm sewage overflow.

## **Industrial Site holding Licences and/or Authorisations.**

There are three active IPPC Authorisations within 500m of the site. The authorisations all appear to relate to Cleansing Services Group located 411m to the north-east. The authorisations relate to disposal or recovery of hazardous and non hazardous waste, temporary storage of hazardous waste and disposal of waste oils by physio-chemical treatment.

There are two active LAPPC within 250m. The nearest relates to unspecified coating processes some 14m east (related to E G Tucker Ltd and thought to be related to car repair) and the other relates to a petrol filling station located 206m to the north-west (on the M32).

There are no records of red list discharge consents or List 1 or 2 dangerous substance inventory sites within 500m.

There are no radioactive substance licenses within 1000m of the site.

There are no sites determined as Contaminated Land under Part IIA EPA 1990 within 1000m of the site.

There are no hazardous substance enforcements within 1000m.

There are no COMAH & NIHHS sites within 500m.

## **Pollution Incidents to Controlled Waters**

There are no recorded pollution incident to controlled waters within 500m of the site.

## **Landfill Sites & Licensed Waste Management Facilities**

There are no active or historical landfill sites referenced within 500m of the site. The nearest historic landfill (Folly Lane) lies 755m to the south-east. The landfill was licensed to accept waste including inert, industrial, household and special waste. The last input date is indicated as 1986.

There are no active licensed waste management facilities located within 500m of the site.

## **Hydrogeology & Hydrology**

The nearest surface water feature is the River Frome located approximately 50m to the north-west of the site. The river appears to flow through a culvert to the west of Frome Bridge.

The topography of the area would suggest that the likely groundwater flow direction would be towards the north-west.

The Redcliffe Sandstone is indicated to be a Secondary A Aquifer with soils of high vulnerability. Secondary A aquifers are permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers.

The site is not shown to lie within a Source Protection Zone.

There are no referenced water abstractions within 500m of the site. At greater distance, numerous other licensed abstractions are referenced and predominantly relate to surface water abstraction from a single point for various uses.

The site is indicated to lie within an area at risk from extreme flooding from rivers without defences (Zone 2). The site is not shown to be at risk of surface water flooding.

## Designated Environmentally Sensitive Sites

The site is not indicated to lie within an environmentally sensitive area.

## Geohazards

### Natural Hazards

The report indicates “no hazard, or very low hazard” with respect to collapsible ground, landslide, ground dissolution, compressible ground, shrinkable clays and running sand.

### Mining, Extraction & Natural Cavities

The site is indicated to lie within an area which may be affected by coal mining. Refer to Section 2.2.

Four coal mines are referenced within 623-983m of the site.

### Bedrock and Faults

The solid geology is confirmed as the Redcliffe Sandstone Formation of Triassic age.

There are no recorded faults within 500m.

### Radon

The Envirocheck report indicates that no radon protection measures are required in the construction of new dwellings or extensions.

## Contemporary Trade Directory Entries

The nearest active or inactive trade directory entries relates to St Marks Garage (garage services) on the site. Other trade directory entries within 250m of the site

include electrical goods, packaging materials, auto services, clothing manufacture, sheet metal fabrication, coatings specialists and oil fuel distributors.

### **Consultations**

The Local Authority was not separately consulted as part of the review process. The Environment Agency (EA) was not separately consulted as part of the review process.

### **4.3 Potential for Contamination & Conceptual Model**

From the available desk study information, the site appears to have been developed in the 18<sup>th</sup> Century and some of the buildings formerly occupying the site were residential. The site was cleared and developed with the existing warehouse in the 1950s. It is possible that the terraced units fronting Wade Street and Great Georges St incorporated cellars or basements into their original construction.

From the historical context of the site and the fact that there are several former potentially polluting industries within likely influence zone (including a former gum works, soap works, tannery, paint/colour works), it is considered that the site in general presents a medium risk of contamination.

The main risks would be associated with possible unknown constituents of any made ground resulting from demolition of former buildings together with possible migration of contaminants from an off-site source. The garage services on the site may have led to some hydrocarbon spillage / seepage and there is staining of the hardstanding inside the garage. In the absence of any below ground fuel tanks, any hydrocarbon contamination is likely to be confined to the surface concrete floor (which was obviously stained). The concrete appeared to be in fairly good condition, as was the asphalt to the rear of the garage) and in the absence of any cracks, any (at least minor) spillage would have been unlikely to penetrate the hardstanding (inside the garage). However, there could be infiltration of hydrocarbon within the car sales area (i.e. gravel surface) from any fuel / oil spillage or leakage. There is also a risk of asbestos from historic brake dust.

There is considered to be a medium risk of migration of ground gas given the likely presence of made ground on the site (and known made ground on adjacent site to the north-west).

The risk categorisation is to be reviewed during the investigation.

A conceptual model is a testable representation of environmental processes on a site and its vicinity. Its purpose is to identify potential contaminants, pathways and receptors with a view to identifying (initially) potential and (eventually) significant pollutant linkages.

A general representation of the potential sources, linkages and receptors (produced in accordance with DEFRA Guidelines (2002)) is presented in the table below:

Primary source	Secondary source	Hazard	Transport mechanism	Pathway	Medium of exposure	Receptor
Unknown constituents of made ground associated with the site or spillage leakage of hydrocarbons.	Possibility of contaminated soils	Range of potential toxic effects	Direct contact with contaminated soils or inhalation of dust or vapours.	Dermal contact at surface or inhalation of dust or vapours	Soil	Humans (Site Workers and end users of the site)
Asbestos dust from brakes or from building materials	Potential leaching of contaminants into groundwater	Derogation of groundwater quality	Fluid transport through groundwater	Vertical flow into groundwater through minor aquifer of high leaching potential	Water	Below site groundwater
Methanogenic decomposition from made ground if encountered in significant thickness		Potential for explosion and asphyxiation	Ground gas migration through geological strata and manmade pathways	Soil/air		Humans (Site Workers and end users of the site)
Possible migration of various contaminants from on or off-site source	Potential leaching of contaminants into groundwater	Derogation of groundwater quality	Fluid transport through groundwater	Vertical flow into groundwater through minor aquifer of high leaching potential	Water	Below site groundwater

The investigation was designed to give a good spread of data across the site of proposed development. In view of the above, contamination testing of soils has formed part of this investigation.

## 5. GROUND INVESTIGATION

### 5.1 Fieldwork

The fieldwork was carried out in general accordance with BS5930<sup>1</sup> on the 1<sup>st</sup> and 9<sup>th</sup> February 2024 and comprised five dynamic sampled boreholes, one dynamic probe and one borehole sunk using a combination of dynamic sampling and rotary core drilling techniques.

The exploratory hole locations were selected and set out by this Company taking into account local constraints and are shown on Figure 1.

Boreholes referenced WS01-05 (Appendix A), were formed using a track mounted Dart dynamic sampling rig. WS01-03 were located inside the garage and the concrete floor slab was first cored using a water flush. Dynamic sampling techniques were employed from below the concrete or from ground level (for WS01-05) to produce continuous disturbed samples. The samples were recovered in semi-rigid plastic liner.

Dynamic probe hole referenced DP01 was performed from ground level with probing operated in general accordance with DPSH-B specification given in BS EN ISO: 22476: Part 2:2005<sup>2</sup>. A sacrificial cone was used along with 32mm diameter x 1.00m long driving rods.

Probe depths were measured with respect to ground level and the number of blows,  $n_{100}$ , recorded for each 100mm penetration of the probe. Dynamic probe tests have been correlated to an SPT N value based on consideration of theoretical energies. As the energies are very similar for DPSH and SPT equipment, the blow count to achieve 300mm penetration ( $n_{300}$ ) should be directly equivalent to a SPT N value although in practice the correlation is not exact and should be regarded as indicative only.

Borehole, referenced BH01 (Appendix A), was formed using a track-mounted Comacchio drilling rig. Heavy duty dynamic sampling techniques were employed from

---

<sup>1</sup> British Standards Institution (2015): Code of practice for site investigations. BS 5930.

<sup>2</sup> British Standards Institution (2005): Geotechnical investigation and testing –Field Testing –Part 2 Dynamic probing BS EN ISO 22476-2 2005

ground level to produce a continuous disturbed sample. The samples were recovered in semi-rigid plastic liner. On refusal to dynamic sampling, the borehole was continued by rotary core drilling techniques utilising a water flush. A double-tube swivel core barrel with a semi-rigid plastic liner was utilised to recover continuous cores. Following damage to the core barrel, the borehole was open hole drilled from 11.00-12.00m.

Standard penetration tests (SPT) were carried out in general accordance with BS EN ISO 22476-3:2005<sup>3</sup> using a solid cone. SPT results are summarised as uncorrected N values on the borehole logs. The energy ratio ( $E_r$ ) of the SPT hammer for the Dart rig is 71% and for the Comacchio rig 60%. The N value may be standardised to 60% free fall energy (of the test equipment) to derive  $N_{60}$  values given as  $N_{60}=71/60$  N value for the Dart rig whilst no correction is required for the Comacchio rig.

The dynamic samples and rotary cores were extracted horizontally from the sampler and core barrel respectively. The lined samples were subsequently split longitudinally to facilitate on site logging and sub sampling by a Chartered Geologist.

Boreholes were monitored for groundwater ingress as dynamic sampling proceeded.

On completion, combined gas/groundwater monitoring standpipes were installed in WS01, WS04 and WS05. The installations consisted of a 50mm ID HDPE plain pipe with a porous filter element set in a filter response zone of non-calcareous pea gravel. The installations were sealed above with a bentonite plug and protected at the surface by a lockable, stopcock cover set in concrete. Installation details are given on the relevant borehole log. In BH01, a 50mm diameter ground monitoring standpipe was installed to 8.00m.

The site was revisited 1 March 2024. Water in BH01 was bailed out (3 times borehole volume) to get a representative water sample for laboratory testing.

Concentrations of methane, carbon dioxide, oxygen, hydrogen sulphide and carbon monoxide were monitored using a Gas Data GFM 436 analyser. Gas flow was

---

<sup>3</sup> British Standards Institute (2005): Geotechnical investigation and testing –Field testing –Standard Penetration Test. BS EN ISO 22476-3:2005 Part 3.

monitored by using an internal flow sensor. The results from three monitoring visits are included in Appendix A.

## 5.2 Logging

A Chartered Geologist carried out the logging of soils and rocks in general accordance with BS5930: 1999. A key to the exploratory hole logs is presented in Appendix A.

Hand shear vane tests were carried out in suitable cohesive samples and the apparent shear strength (kPa) so derived is indicated on the logs.

Detailed descriptions of the samples are given in the borehole logs, Appendix A, along with details of sampling, in situ testing, groundwater ingress and relevant comments on drilling techniques.

## 5.3 Laboratory Testing

A schedule of laboratory tests was prepared by this Company; the following tests being carried out in accordance with BS EN ISO 17892 4: 2014:5. The results are presented in Appendix C.

Sieve analysis was carried out on two granular samples to determine the particle size distribution.

Point load index tests were carried out on five selected lengths of core in accordance with ISRM (1985)<sup>4</sup>. Axial and diametral testing was carried out upon each intact section of selected core sample.

Soil samples were despatched to Derwentside Environmental Testing Services Limited (DETS) and subjected to in-house chemical analyses for a suite of determinants as tabulated below.

---

<sup>4</sup> ISRM Suggested method for determining point load strength, revision to ISRM suggested method (1985). Pergamon Press.

Nr of samples	Type	Determinants
9 1	Soil Water	As, Cd, Cu, Pb, Hg, Ni Se, Zn, Cr, Cr (VI), total cyanide, speciated (16) PAH, phenol, pH.
5	Soil	(EPH) Extractable Petroleum Hydrocarbons (C <sub>10</sub> -C <sub>40</sub> )
4 1	Soil Water	Speciated Petroleum Hydrocarbons
8	Soil	Asbestos screen
4 1	Soil Water	Water soluble sulphate and pH
1	Soil	Waste Acceptance Criteria Test (WAC)

The results are presented in Appendix D.

## **6. GROUND CONDITIONS & GEOTECHNICAL PROPERTIES**

### **6.1 General**

The following sections summarise ground conditions recorded during the investigation which were in general agreement with the published geology of the area the Redcliffe Sandstone Formation but with a cover of made ground.

### **6.2 Made Ground**

Made ground was observed in all boreholes to depths of between 1.20m and 2.50m. The variation is thought likely due to encountering infilled old cellars where greater thickness was proved.

In WS01-03 located inside the garage, the concrete slab varied 0.15-0.20m thick. In WS01-02 the slab was underlain by granular subbase of mainly grey and brown sandy gravel / gravelly sand. This layer was absent in WS03.

The majority of the made ground comprised grey and brown ashy gravel and / or clayey sand to sand and gravel. Gravel (and also cobbles) comprised of sandstone, brick and concrete, with traces of fine coke and china fragments. In WS04 a layer of concrete was proved at 0.60-0.70m.

Standard Penetration Tests (SPT) performed within the essentially granular made ground recorded  $N_{60}$  values ( $N_{60}$  value being the amended N value to account for the energy ratio of SPT hammer) of 1-6 indicating that these soils are very loose to loose in terms of relative density.

### **6.3 Redcliffe Sandstone Formation (RSF)**

Deposits thought to represent weathered RSF were observed in the boreholes below made ground at depths 1.20-2.50m and seen to rockhead at depths of 3.70-5.00m. The deeper borehole (BH01) was completed at 12.10m within these deposits.

The closer to surface weathered RSF typically comprised a reddish brown locally clayey sand with local thin interbeds of stiff red brown sandy clay.

SPT  $N_{60}$  values of 9-47 were recorded within these deposits. The results typically show the sand to be medium dense but locally loose near the upper surface and dense closer to rockhead.

Particle size distribution tests performed within the granular material recorded 0-1% gravel; 77-86% sand and 14-22% silt/clay sized fractions. These soils may be considered to be poorly graded.

Rockhead of less weathered RSF was encountered at depths varying 3.70-5.00m bgl and the rock was penetrated in BH01 (by rotary drilling). The stratum typically comprised very weak and weak reddish brown fine to medium grained sandstone with very closely and closely spaced (locally medium spaced) discontinuities and rock quality designation (RQD) values of 27 and 46% (but zero on run 8.50-9.00m although this is thought likely due to drilling disturbance). Interbedded laminae and very thin beds of purple-brown mudstone were encountered.

Below 10.20m and proved to 11.00m, the RSF comprised extremely to very weak purple-brown locally spotted greenish grey mudstone which was sub-horizontally laminated to very thinly bedded and with very closely spaced discontinuities. An RQD value (on the single run completed) recorded 33%. A medium strong sandstone bed was observed in BH01 between 7.40-7.55m.

SPT tests using a solid cone recorded extrapolated  $N_{60}$  values of 272-500 within the sandstones and 250 within the underlying mudstone.

Depending on the rock type, correlation factors of 14-24 between unconfined compressive strength and point load index typically apply. Using the upper bound correlation factor value of 24, correlated unconfined compressive strength values of 0.72-6.9MPa were obtained suggesting extremely weak through weak rock and correlate well with described strengths.

The boreholes drilled on the adjacent site to the north-west (presented in Appendix B) show predominantly mudstones and also lower strength rock (based on extrapolated SPT value) which suggest possible facies change or possible faulting between the two sites.

It was of note that there was no staining of the soils which could be attributable to spillage / leakage of hydrocarbon oil / fuel for example.

#### 6.4 Groundwater

WS01-WS05 were all dry during drilling at depths up to 5.00m bgl (rockhead). The installations in WS01-02 and WS04 also remained dry (at up to 4m depth).

BH01 was dry to 4.00m and before introduction of water drilling flush (which disguised any deeper water strikes). On completion of drilling BH01 at 12.10m, water was recorded in the borehole at 4.70m. Monitoring of the installation in BH01 (on dates below) consistently recorded a water level of 4.70m.

Date	Water Level in BH01 (m,bgl)
9/2/2024	4.70
1/3/2024	4.70
22/3/2024	4.70

It was noted that boreholes drilled for the adjacent site to the north-west (which is at a lower elevation to the present site), recorded standing water levels of 3.29-3.42m bgl in 2014 (that site is at a slightly lower level to the present)).

Water levels are subject to change with varying climatic conditions.

## 7. DISCUSSION AND CONCLUSIONS

### 7.1 General

As indicated in Section 3, it is understood that the project involves demolition of the existing garage and construction of a four-storey apartment building.

Details of structural loads were not known at the time of investigation but are likely to be relatively high.

### 7.2 Foundation Considerations

Given the significant thickness of made ground (infilled cellars) and locally loose sand, it is considered that structural loads should be transferred to the RSF using piled foundations.

Rotary bored piles are likely to be the preferred method of piling. No significant contribution to pile capacity would be derived from the made ground; therefore piles would develop the majority of working load from end bearing and socket skin friction within the sandstones/mudstone of the RSF.

As the capacity of piles ultimately depends upon the type and method of installation, detailed design should be entrusted to competent piling contractors. Consideration should be given to carrying out loading tests on selected piles to confirm design assumptions. The piling specialist's attention should be drawn to the potential presence of hard layers / structures that might exist from former building structures / old infilled cellars on the site. Additionally, consideration to the borehole drilled on the immediate adjacent site to the north-west (presented in Appendix B) show lower strength rock (based on extrapolated SPT value) which should be taken into consideration in pile design.

Fully suspended ground floor slabs should be adopted for the scheme.

### 7.3 Excavations

Subject to the removal of relict foundations and floor slabs, excavations to anticipated formation levels to form pile caps should be within the scope of conventional excavators. Breakers will be required to remove existing hardstanding and any redundant foundations / buried walls etc. Resultant excavations (below formation level) should be backfilled with suitable compacted (preferably granular) material. Crushed site won material may be suitable for this purpose.

It is considered that if any potentially unstable excavations are to be entered then the sides should be battered back and/or shoring methods and equipment should be utilised in accordance with the relevant Health and Safety Acts.

Groundwater monitoring suggests that groundwater is likely to be present below the level of likely excavation and should not therefore give rise to any significant issues. It should be noted that groundwater levels may rise in winter or at other times following periods of prolonged inclement weather.

### 7.4 Buried Concrete

BRE Special Digest 1<sup>5</sup> (2005) is used to assess the soil in respect of buried concrete. Soil acidity is relatively neutral to slightly alkaline, varies 7.8 to 8.8 but 9.9 in one sample. Results of water-soluble sulphate indicate that the site falls within Design Sulphate Class DS-3 and AC-3. Total Potential Sulphate is up to 2.16% and falls in DS-4, AC-4. It is therefore recommended that buried concrete is designed to Design Sulphate Class DS-4 and AC-4.

---

<sup>5</sup> Building Research Establishment (2005): Concrete in aggressive ground. BRE Special Digest 1, Part C. Third Edition.

## 7.5 Ground Gas

### Radon

The Envirocheck report indicates that no radon gas protection measures required. Notwithstanding the above, an expert advisory group of the Health Protection Agency (HPA) have recommended that the Agency should consider lowering safety levels from  $200\text{Bqm}^{-3}$  to  $100\text{Bqm}^{-3}$  in areas known to have high concentrations of radon. In addition, the Advisory Group has recommended that radon control measures in new buildings, currently required only in high radon areas, should be considered in most if not all of the UK. Taking the above into consideration, it may be worth considering incorporation of basic radon protection measures into the development.

Gas generated from made ground on the site was identified as a possible risk to the proposed development. As a consequence, a programme of gas monitoring has been undertaken. The results to-date are included in Appendix A and show maximum methane concentration of 0.0%, carbon dioxide levels of up to 1.8% with no significant gas flow ( $<0.1\text{l/hr}$ ). No significant carbon monoxide or hydrogen sulphide was observed.

Based upon the gas readings (three sets of results) and reference to BS8485:2015<sup>6</sup> a Gas Screening Value (GSV) of  $<0.01\text{l/h}$  is obtained. With carbon dioxide  $<5\%$ , a Characteristic Gas Situation (CS) of CS-1 is derived along with a very low gas hazard potential. Consequently, gas protection is not considered necessary.

Given the low potential for gas on the site (from infilled cellars) and the non-methanogenic nature of the made ground encountered, it is considered that no further readings are necessary to characterise the gas regime on the site; the test results include periods of low and falling barometric pressure (when gas flow is typically higher) confirm this.

---

<sup>6</sup> BS8485:2015; Code of Practice for the design of protective measures for methane and carbon dioxide ground gases for new buildings.

## 7.6 Contamination Considerations

### Basis of Assessment –Soils

The results of ground investigation works have been assessed utilising a Tier 1 quantitative risk assessment; methodology taken from the Environment Agency (EA) R&D Publication 20 'Methodology for the Derivation of Remedial Targets for Soil and Groundwater to Protect Water Resources'. The tiered approach acts as a screening process whereby low risk sites are eliminated in order to identify sites that present the greatest environmental risks. The ground data is used to characterise any contaminant source and subsequently to identify any sensitive environmental receptors and appropriate target concentration at the receptor.

In December 2013 the output of a DEFRA funded research project (SP1010)<sup>7</sup> was published and included a draft methodology for determining Human Health Category 4 Screening Levels (C4SLs). In March 2014, DEFRA published a Policy Companion Document to accompany the research which endorsed the draft methodology. The C4SLs represent estimates of contaminant concentrations in soils that can, when used in accordance with defined risk assessment methodology be used to determine whether land is clearly not contaminated for human health receptors for specified land uses within the context of Part 2A. The methodology developed for determining C4SLs is described as being strongly precautionary, but has been based upon a pragmatic approach to contaminated land risk assessment adopting an acceptably low, rather than minimal level of risk as defined by EA (CLEA) Soil Guideline Values (SGV's).

In October 2014, NHBC<sup>8</sup> ratified use of C4SLs which may be used for schemes in England and Wales as generic screening values for contaminants in soils, as long as they are justifiable and defensible in the conceptual site model for the site. Where representative contaminant concentrations exceed C4SLs, remediation or further detailed assessment will normally be required. It should be noted however that individual regulators should be consulted to establish whether the use of C4SLs are accepted under the planning regime.

---

<sup>7</sup> CL:AIRE (2013) Development of category 4 screening Levels for the assessment of land affected by contamination

<sup>8</sup> NHBC (October 2014) Technical extra, Issue 15

## Comparison of Results - Soil

Results were compared with the C4SLs for a residential site use without plant uptake use to best reflect apartment blocks. It is understood that there is no provision for open space / soft landscaping. Where no C4SL was available, the results were compared with the generic guidelines published by LQM/CIEH ('The LQM/CIEH S4ULs for Human Health Risk Assessment'- CIEH 2015). A Soil Organic Matter of 1.0% SOM was assumed.

### General Contaminants

Contaminant	Concentration ranges (number of samples =9)	GACs (mg/kg)	Exceedance Location
Arsenic	≤40mg/kg	40 [640]	
Cadmium	≤3.0mg/kg	149 [420]	
Chromium (III)	≤19mg/kg	910 [8600]	
Chromium (VI)	≤1.0mg/kg	21 [49]	
Copper	≤900mg/kg	7100 [68,000]	
Lead	Range 38 - 580mg/kg	310 [2,200]	WS02 at 1.00m; 340mg/kg (ashy sand) WS04 at 1.00m; 580mg/kg (ashy sand)
Mercury	≤1.4mg/kg	56 [1,100]	
Nickel	≤36mg/kg	180 [980]	
Phenol	≤0.9mg/kg	440 [440]	
Selenium	≤0.5mg/kg	430 [12,000]	
Vanadium	≤33mg/kg	1200 [9,000]	
Zinc	≤820mg/kg	40000 [730,000]	

GACs derived from Land Quality Management (LQM)/CIEH Values (2015) for residential end use without home grown produce. CS4SL (residential without plant uptake. [LQM/CIEH (2015) value for commercial use])

When compared with the GAC screening values for published C4SLs or LQM/CIEH values, there were no exceedances which could be considered to present an unacceptable risk to human health with the exception of elevations of lead in the made ground of ashy gravelly sand in WS02 at 1.00m and WS04 at 1.00m

### Polyaromatic Hydrocarbons (PAH)

Contaminant	Concentration ranges number of soil samples = 8	GACs (mg/kg)	Exceedance Location
Naphthalene	Range <0.1-47mg/kg	2.3 [190]	WS01 at 0.25m; 47mg/kg
Acenaphthylene	≤3.8mg/kg	2900 [83,000]	
Acenaphthene	≤9.1mg/kg	3000 [84,000]	
Fluorene	≤14mg/kg	2800 [63,000]	
Phenanthrene	≤78mg/kg	1300 [22,000]	
Anthracene	≤20mg/kg	31,000 [520,000]	
Fluoranthene	≤71mg/kg	1500 [23,000]	
Pyrene	≤61mg/kg	3700 [54,000]	
Benzo(a)anthracene	Range <0.1-31mg/kg	11 [170]	WS01 at 0.25m; 31mg/kg
Chrysene	Range <0.1-34mg/kg	30 [350]	WS01 at 0.25m; 34mg/kg
Benzo(b)fluoranthene	Range <0.1-20mg/kg	3.9 [44]	WS01 at 0.25m; 47mg/kg
Benzo(k)fluoranthene	≤14mg/kg	110 [1200]	
Benzo(a)pyrene	Range <0.1-28mg/kg	5.3 [35]	WS01 at 0.25m; 47mg/kg
Benzo(ghi)perylene	≤14mg/kg	360 [3900]	
Dibenzo(ah)anthracene	Range <0.1-3.1mg/kg	0.31 [3.5]	WS01 at 0.25m; 3.1mg/kg
Indeno(123-cd)pyrene	≤14mg/kg	45 [500]	

GACs derived from Land Quality Management (LQM)/CIEH Values (2015) for residential end use without home grown produce. CS4SL (residential without home grown produce). [LQM/CIEH (2015) value for commercial use]

When compared with the GAC screening values for published C4SLs or LQM/CIEH values, there were exceedances of several PAH's in WS01 (made ground) which could be considered to present an unacceptable risk to human health. All elevations relate to the sample of made ground in WS01 at 0.25m.

### Petroleum Hydrocarbons

Extractable Petroleum Hydrocarbons, EPH (C<sub>10-40</sub>) screening tests were carried out on selected soil samples and recorded total EPH <10mg/kg and are not considered significant. However, the sample from WS04 at 0.30m (on area of gravel) recorded 220mg/kg which would warrant further assessment in due course (as discussed in

Section 7.72). It is of note that no hydrocarbon staining was seen in the soils (but this was obviously confined to borehole locations).

Speciated Total Petroleum Hydrocarbons testing on four soil samples showed the following results:

Contaminant	Concentration ranges No of samples = 4	GACs (mg/kg)	Exceedences
Aliphatic TPH C <sub>5</sub> to C <sub>6</sub>	≤0.43mg/kg	42 [3200]	
Aliphatic TPH C <sub>6</sub> to C <sub>8</sub>	≤0.09mg/kg	100 [7800]	
Aliphatic TPH C <sub>8</sub> to C <sub>10</sub>	≤0.27mg/kg	27 [2000]	
Aliphatic TPH C <sub>10</sub> to C <sub>12</sub>	≤1.5mg/kg	130 [9700]	
Aliphatic TPH C <sub>12</sub> to C <sub>16</sub>	≤1.2mg/kg	1100 [59,000]	
Aliphatic TPH C <sub>16</sub> to C <sub>21</sub>	≤2.4mg/kg	65000	
Aliphatic TPH C <sub>21</sub> to C <sub>35</sub>	≤23mg/kg	[1,600,000]	
Aromatic TPH C <sub>5</sub> to C <sub>7</sub>	≤0.01mg/kg	370 [26,000]	
Aromatic TPH C <sub>7</sub> to C <sub>8</sub>	≤0.01mg/kg	840 [56,000]	
Aromatic TPH C <sub>8</sub> to C <sub>10</sub>	≤0.11mg/kg	47 [3,500]	
Aromatic TPH C <sub>10</sub> to C <sub>12</sub>	≤5.6mg/kg	250 [16,000]	
Aromatic TPH C <sub>12</sub> to C <sub>16</sub>	≤4.8mg/kg	1800 [36,000]	
Aromatic TPH C <sub>16</sub> to C <sub>21</sub>	≤25mg/kg	1900 [28,000]	
Aromatic TPH C <sub>21</sub> to C <sub>35</sub>	≤23mg/kg	1900 [28,000]	

GACs derived from Land Quality Management (LQM)/CIEH Values (2015) for residential end use without home grown produce. [LQM/CIEH (2015) value for commercial use]

When compared with the GAC screening values for published C4SLs or LQM/CIEH values, there were no exceedances which could be considered to present an unacceptable risk to human health.

### Asbestos Containing materials (ACMs)

Eight soil samples were screened for the presence of asbestos fibres. One sample WS01 at 0.25m identified fibres of amosite. The sample comprised grey and brown

gravelly sand sub-base below the concrete surfacing and seen to depth 0.40m below top of slab; the layer being 0.25m thick.

### Comparison of Results - Groundwater

A groundwater sample taken from BH01 was subjected to analysis to ascertain whether groundwater has been impacted by previous potentially contaminative land-use on or from migration from an off-site source (particularly given the high industrial usage of the general surrounding area).

When assessing the risks to controlled waters, various assessment criteria apply depending on the nature of the assessment and the conceptual site model. When a surface water body is involved, then the Environmental Quality Standards (EQS) are the relevant assessment criteria as they are designed to be protective of surface water ecology. Where a public water supply or principal aquifer involved, then the standards defined in The Water Supply (Water Quality) Regulations are the primary source of assessment criteria. For instances where there are no UK assessment criteria, then the World Health Organisation (WHO) drinking water guidelines may be used.

Results of the analysis are summarised in the table below as a Tier 1 water environment screening.

Contaminant	Concentration (µg/l)	EA EQS (µg/l)	UK DWS (µg/l)	WHO (µg/l)	Exceedence Location
Arsenic	1.1	50	10	10	
Cadmium	0.05	0.08	5		
Chromium	2.3	4.7-250*	50	50	
Chromium (VI)	≤7.0	2-20*	50		
Copper	2.6	1-28*	2,000		
Cyanide (Total)	≤40	-	50		
Lead	0.3	4-250*	10		
Mercury	0.12	1	1		
Nickel	29	8-200*	20		
Selenium	2.8		10	40	
Vanadium	0.80	20			

Contaminant	Concentration (µg/l)	EA EQS (µg/l)	UK DWS (µg/l)	WHO (µg/l)	Exceedence Location
Zinc	61	8-500*	5,000		
Phenol	≤0.50	30	0.5		
PAH (Total) <sup>a</sup>	≤0.04		0.1		
Benzo(a)pyrene	≤0.01		0.01		
Petroleum Hydrocarbons*					
Aromatic C <sub>&lt;10</sub>	<1.0		10 <sup>b</sup>	100	
Aromatic C <sub>10-12</sub>	<1.0		10 <sup>b</sup>	100	
Aromatic C <sub>12-16</sub>	<1.0		10 <sup>b</sup>	100	
Aromatic C <sub>16-21</sub>	<1.0		10 <sup>b</sup>	90	
Aromatic C <sub>21-35</sub>	<1.0		10 <sup>b</sup>	90	
Aliphatic C <sub>5-6</sub>	<0.1		10 <sup>b</sup>		
Aliphatic C <sub>6-8</sub>	<0.1		10 <sup>b</sup>		
Aliphatic C <sub>8-10</sub>	<0.1		10 <sup>b</sup>	300	
Aliphatic C <sub>10-12</sub>	53		10 <sup>b</sup>	300	
Aliphatic C <sub>12-16</sub>	48		10 <sup>b</sup>	300	
Aliphatic C <sub>16-21</sub>	120		10 <sup>b</sup>	300*	
Aliphatic C <sub>21-35</sub>	480		10 <sup>b</sup>	300*	
Total Ali/Aro	710		10 <sup>b</sup>	300	

<sup>a</sup> Concentration for sum of benzo(b)flouranthene, benzo(k)flouranthene, benzo(ghi)perylene and indeno(123-cd)pyrene

<sup>b</sup> level for DWS now revoked

EQS values are EQS Annual Average Standards derived to protect the most sensitive aquatic life; several are derived from Scottish regs. \*There are no WHO guideline values for aliphatic fractions C16-21 and C21-C35; values for aliphatic fractions inclusive of C8-C16 (300µg/l) has been applied.

The water sample from BH01 has shown a slight exceedance of aliphatic hydrocarbons (C<sub>21-35</sub> –i.e. lube / motor oil range) and for total hydrocarbon above the GACs considered.

## 7.7 Risk Assessment & Recommendations

### 7.7.1 Qualitative Risk Assessment

To determine the potential for contamination from the site, it is necessary to establish whether an environmental risk is present. For a potential risk to occur it is necessary to understand whether contaminants are present; what (if any) are the target receptors within and surrounding the site, and whether pathways exist, or could exist, between the contaminant and the receptor;

*Source* (e.g. primary sources –leaking above ground storage tanks; secondary sources –free phase product within the ground or soil/groundwater migration).

*Receptor* (e.g. on-site contractor, off-site residential property, groundwater, surface water and fauna and flora).

Target mechanism between the source and receptor (e.g. groundwater migration), i.e. *Pathway*.

Following the findings of the ground investigation and chemical testing a further conceptual model/qualitative risk assessment has been carried out to identify whether any significant pollutant linkages are present at the site. The presence of various PAHs and of lead has been recorded locally in the soil (and possibly hydrocarbon IN WS04 at 0.30m depth and a slight exceedance (considered minor) of hydrocarbon in the groundwater. The origin of the hydrocarbon in groundwater may be generated on site or from off site. It is considered likely that the origin is off site given the historical industrial past around the site. There are no known fuel tanks on the site and the garage (as tyre sales and vehicle maintenance) is not a longstanding business at this premise.

Source	Pathway	Receptor	Potential Significant Pollutant Linkage	Control Measures to be Implemented
Soils - Localised elevations of lead and PAH and EPH Localised presence of asbestos fibres.	Dermal contact with soils	Construction staff	<b>No –elevations of lead and PAH below the commercial guideline values considered to be appropriate to construction staff.</b>	Appropriate and suitable PPE, welfare facilities, good hygiene practice. A careful watch for unidentified contamination hotspots should be maintained
		Future site occupants	<b>Yes –elevations above relevant guidelines values considered to be appropriate to end users.</b>	Soil will be encapsulated below hardstanding thereby removing risk to site end users
Water –Slight TPH impacted groundwater	Ingestion of contaminated soil	Construction staff.	<b>No –elevations of lead and PAH below the commercial guideline values considered to be appropriate to construction staff.</b>	Appropriate and suitable PPE, welfare facilities, good hygiene practice. A careful watch for unidentified contamination hotspots should be maintained
		Future site occupants	<b>Yes –elevations above relevant guidelines values considered to be appropriate to end users.</b>	No provision for soft landscaping Soil will be encapsulated below hardstanding removing risk to site end users.
	Inhalation of indoor and outdoor dust	Construction staff	<b>Yes –asbestos fibres present a risk to construction staff.</b>	Remediation required for the removal of asbestos impacted soil. Further assessment required to identify extent of impacted soil following the removal of ground floor slab.
		Future site occupants	<b>Yes –asbestos fibres present a risk</b>	

Source	Pathway	Receptor	Potential Significant Pollutant Linkage	Control Measures to be Implemented
	Migration into underlying groundwater	Groundwater and possible onward migration to surface water bodies	<b>Yes –slight elevation of TPH in groundwater</b>	Elevation considered minor and not expected to present a particular hazard to site or local environment. Regardless, following removal of the floor slab (and given the recent history of a vehicle repair business) detailed inspection required across the entire site for any TPH impacted soil and further assessment / remediation as necessary
Ground Gas	Soil/bedrock	Future site occupants / Building	<b>No</b>	No radon protection required No ground gas protection required.

### 7.7.2 Remedial/Control Measures

There are local elevations of lead and PAHs in the made ground above the relevant GAC level. There is understood to be no provision for soft landscape and the made ground in this area will be effectively encapsulated beneath the proposed new building (concrete slab) therefore the risk to end users of the site is considered to be negligible in this respect. It should be possible to manage risk to groundworkers with suitable PPE and method statement for their work.

The local presence of loose asbestos fibres as amosite was detected in WS01 at 0.25m. There is currently no acceptable level of asbestos fibres in soil.

Following removal of the ground floor slab, it is recommended that further testing of the subsoils is carried out (across the whole site) to assess the extent of soil impacted by asbestos fibres to better identify the area for remediation. A remedial strategy and validation report for the remediation will be required (based on these results) in due course.

Further, following removal of the slab, the subsoils should be inspected (extended across the whole site by trial pitting) for any areas impacted by hydrocarbon; this can be done visually and with use of a PID detector. If any suspect areas are seen then additional testing may be required along with remediation (in-situ or excavation with removal of impacted soil off site).

The main risk will be to groundworkers during construction and these risks can be managed by the appointed groundworks contractors through appropriate use of PPE, dust suppression and appropriate mitigation precautions with regard to loose asbestos fibres etc.

It is recommended that buried utility services crossing the made ground are placed in a clean corridor (lined trenches).

Given that levels of toxic metals and PAHs in groundwater are low, the corresponding risk due to leaching from the soils is considered to be negligible especially as the site will be covered with hardstanding (thereby avoiding any water infiltration). It is considered likely that the slight elevation of TPH in the groundwater is a typical level in this part of Bristol from historic industrial activities. Any risk to groundwater from the site would be further addressed following inspection on removal of the floor slab for any areas impacted by hydrocarbon. The level is not considered to warrant ground water remediation.

A careful watch should be maintained during any earthworks on the site for any contamination hotspots not identified during the investigation. If any such potentially contaminated hotspots are encountered, further advice should be sought.

The recommendations given are subject to agreement with Local Authority and Environment Agency and it is advised that liaison with these bodies is undertaken prior to any development commencing at the site.

### **7.7.3 Waste Disposal**

The results of Waste Acceptance Criteria tests are presented in Appendix D. It is recommended that results from the chemical analysis are forwarded to the preferred landfill operator to undertake their own assessment.

It is a legal requirement that all soils to be removed from site undergo some form of pre-treatment prior to disposal.

Pre-treatment is a physical / chemical / thermal or biological process, including sorting, that also changes the characteristics of the waste and must do so in order to;

- 1) reduce its volume; or
- 2) reduce its hazardous nature; or
- 3) facilitate its handling; or
- 4) enhance its recovery

To comply with pre-treatment laws it is recommended that segregation of different soils is carried out i.e. sub-base (and any crushed concrete) from made ground and natural subsoils.

The Waste Hierarchy, as defined within the Waste (England and Wales) Regulations 2011, must be applied when dealing with all waste generated during the development at the site.

We recommend that sufficient consultation is carried out with the waste disposal facility prior to despatching any materials from site.

## **8. GENERAL REMARKS**

The comments given in this report and the opinions expressed assume that ground conditions do not vary beyond the range revealed by this investigation. There may however, be conditions at or adjacent to the site, which have not been disclosed by the investigation and which, therefore, have not been considered in this report. Accordingly, a careful watch should be maintained during any future groundworks and the recommendations of this report reviewed as necessary.

This report has been prepared for The Client and their agents in accordance with the terms and conditions of the appointment of CGL. This report shall not be relied upon or transferred to other parties without the express written consent of CGL. Should any information contained within this report be used by any unauthorised third party it is done so at their own risk and shall not be the responsibility of CGL.

Project Name: Proposed Residential Development	Project No: 24533	Co-ords:	Hole Type WLS
Location: 11-15 Wade St, Bristol		Level: mAD	Scale 1 : 37.5
Client: Horizon Construction Bristol Ltd		Dates: Start: 01/02/2024 End: 01/02/2024	Logged By

Installation	Water Levels	Samples & In Situ Testing			Sample	Depth (m)	Level (mAD)	Legend	Stratum Description	
		No/Type	Depth (m)	Results						
		C	0.00 - 0.20					MADE GROUND: 180mm CONCRETE on grey sandy gravel	0	
		DS	0.20 - 3.00		0.25			MADE GROUND: Dark grey, light grey and dark brown ashy gravelly SAND. Gravel of concrete, brick and sandstone.		
					1.10			Red brown SAND. Clayey in parts.	1	
					2.60				2	
					2.75			Stiff red brown sandy CLAY		
					3.00			Red brown SAND	3	
								Borehole completed at 3.00m.	4	
									5	
									6	
					{6.00}					

**REMARKS:**  
 Surface concrete slab cored in 150mm diameter. Borehole then progressed by dynamic sampling using Dart window sampling rig  
 SPT hammer calibration gives Energy Ratio 71%  
 Borehole dry  
 On completion, borehole backfilled with arisings and bentonite pellets

		C	9.00 - 10.50		100% 95% 27%	10.20		Very weak to weak red brown fine to medium grained SANDSTONE with closely to medium spaced subhorizontal rough irregular discontinuities. Medium spaced laminae and very thin beds (20-30mm thick) of dark purple brown MUDSTONE.		9
		S	10.50 - 10.60		75% 50% 33%					10
		S	11.00 - 11.10	S*333		11.00		Extremely to very weak locally subhorizontally laminated to very thinly bedded dark purple brown locally spotted light green grey MUDSTONE with very closely spaced tight discontinuities		11
S	12.00 - 12.10	S*300		12.10		Open hole drilled (no recovery) -possibly MUDSTONE?		12		
					{16.00}			Borehole completed at 12.10m.		13
										14
										15
										16

**REMARKS:**  
 Borehole progressed by dynamic sampling to 4.00m then rotary coring with water flush to 11.00m using a Comacchio 305 multi-purpose sampling rig. Following rig breakdown borehole progressed by open hole drilling 11.00-12.00m.  
 SPT hammer calibration gives Energy Ratio 60%  
 H=hand shear vane (kPa)  
 Ground water not encountered prior to introduction of water flush at 4.00m. Water standing at 4.70m on completion  
 On completion, groundwater monitoring well installed to 8.00m comprising 0.00-1.00m, plain pipe set in bentonite seal; 1.00-8.00m: slotted pipe set in filter gravel.  
 8.00-12.10m: bentonite pellets. Protective steel cover at surface.

		C SPT	7.80 - 9.10 7.80 - 7.96	C* 126	↓	7.80		Weak reddish brown locally pale greenish grey MUDSTONE with very close to closely spaced sub horizontal rough irregular tight discontinuities	8	
						{8.00}		Continued next sheet		

**REMARKS:**  
 EQUIPMENT: Hand digging tools. Fraste track mounted rotary rig  
 METHOD: Hand dug inspection pit 0.00-1.20m. Continuous disturbed sampling (113mm dia) 1.00-4.80m. Rotary core drilling 4.90-11.40m using T6-116 core barrel and water/polymer flush  
 CASING: 140mm to 4.80m.  
 GROUNDWATER: Strike at 3.63m rising to 3.42m in 10 minutes  
 INSTALLATIONS: 50mm dia standpipe installed to 5.00m. Flush lockable cover set in concrete 0.00-0.20m; plain pipe with compacted arisings 0.20-0.50m; plain pipe with bentonite seal 0.50-1.00m; slotted pipe set in filter gravel 1.00-5.00m; bentonite seal 5.00-6.00m; backfill 6.00-11.15m

2296834	WS05 1.00	SOIL	NAD	none	Ben Barsby

Crocidolite = Blue Asbestos, Amosite = Brown Asbestos, Chrysotile = White Asbestos. Anthophyllite, Actinolite and Tremolite are other forms of Asbestos. Samples are analysed by DETSC 1101 using polarised light microscopy in accordance with HSG248 and documented in-house methods. NAD = No Asbestos Detected. Where a sample is NAD, the result is based on analysis of at least 2 sub-samples and should be taken to mean 'no asbestos detected in sample'. Key: \* -not included in laboratory scope of accreditation.

DETS cannot be held responsible for the integrity of samples received whereby the laboratory did not undertake the sampling. In this instance samples received may be deviating. Deviating Sample criteria are based on British and International standards and laboratory trials in conjunction with the UKAS note 'Guidance on Deviating Samples'. All samples received are listed above. However, those samples that have additional comments in relation to hold time, inappropriate containers etc are deviating due to the reasons stated. This means that the analysis is accredited where applicable, but results may be compromised due to sample deviations. If no sampled date (soils) or date+time (waters) has been supplied then samples are deviating. However, if you are able to supply a sampled date (and time for waters) this will prevent samples being reported as deviating where specific hold times are not exceeded and where the container supplied is suitable.

### Soil Analysis Notes

Inorganic soil analysis was carried out on a dried sample, crushed to pass a 425µm sieve, in accordance with BS1377.

Organic soil analysis was carried out on an 'as received' sample. Organics results are corrected for moisture and expressed on a dry weight basis.

The Loss on Drying, used to express organics analysis on an air dried basis, is carried out at a temperature of 28°C +/-2°C.

### Disposal

From the issue date of this test certificate, samples will be held for the following times prior to disposal :-

Soils - 1 month, Liquids - 2 weeks, Asbestos (test portion) - 6 months

End of Report

## Certificate of Analysis

*Certificate Number* 24-03236

*Issued:* 22-Feb-24

*Client* Core Geotechnics Ltd

All samples received are listed above. However, those samples that have additional comments in relation to hold time, inappropriate containers etc are deviating due to the reasons stated. This means that the analysis is accredited where applicable, but results may be compromised due to sample deviations. If no sampled date (soils) or date+time (waters) has been supplied then samples are deviating. However, if you are able to supply a sampled date (and time for waters) this will prevent samples being reported as deviating where specific hold times are not exceeded and where the container supplied is suitable.

### Soil Analysis Notes

Inorganic soil analysis was carried out on a dried sample, crushed to pass a 425µm sieve, in accordance with BS1377.

Organic soil analysis was carried out on an 'as received' sample. Organics results are corrected for moisture and expressed on a dry weight basis.

The Loss on Drying, used to express organics analysis on an air dried basis, is carried out at a temperature of 28°C +/-2°C.

### Disposal

From the issue date of this test certificate, samples will be held for the following times prior to disposal :-

Soils - 1 month, Liquids - 2 weeks, Asbestos (test portion) - 6 months

### Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

## Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

## Artificial Ground and Landslip Map - Slice A

## Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

## Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

## coal mining report

11-15, WADE STREET, BRISTOL, BRISTOL, BS2 9DR

### Known or potential coal mining risks

Future underground coal mining

Page 4

### Further action

No further reports from the Coal Authority are required. Further information on any next steps can be found in our Professional opinion.

For more information on our reports please visit [www.groundstability.com](http://www.groundstability.com)

### Professional opinion

According to the official mining information records held by the Coal Authority at the time of this search, evidence of, or the potential for, coal mining related features have been identified. It is unlikely that these features will impact on the stability of the enquiry boundary.

# Professional opinion

## Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

MINE GAS: Please note, if there are no recorded instances of mine gas within the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

If you are looking to develop, or undertake works, within a coal mining development high risk area your Local Authority planning department may require a Coal Mining Risk Assessment to be undertaken by a qualified mining geologist or engineer. Should you require any additional information then please contact the Coal Authority on 0345 762 6848 or email [cmra@coal.gov.uk](mailto:cmra@coal.gov.uk).

# Detailed findings

Information provided by the Coal Authority in this report is compiled in response to the Law Society's CON29M Coal Mining enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL.

The Coal Authority owns the copyright in this report and the information used to produce this report is protected by our database rights. All rights are reserved and unauthorised use is prohibited. If we provide a report for you, this does not mean that copyright and any other rights will pass to you. However, you can use the report for your own purposes.

## 1 Past underground coal mining

The property is not within a surface area that could be affected by any past recorded underground coal mining.

## 2 Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

## 3 Future underground coal mining

The property is not in an area where the Coal Authority has received an application for, and is currently considering whether to grant a licence to remove or work coal by underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

## 4 Mine entries

There are no recorded coal mine entries known to the Coal Authority within, or within 20 metres, of the boundary of the property.

## 5 Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

## 6 Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

## 7 Present opencast coal mining

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

## 8 Future opencast coal mining

There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

## 9 Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

## 10 Mine gas

The Coal Authority has no record of a mine gas emission requiring action.

## 11 Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out procedures.

## 12 Withdrawal of support

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

## 13 Working facilities order

The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

## 14 Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

# Statutory cover

## Coal mining subsidence

In the unlikely event of any coal mining related subsidence damage, the Coal Authority or the mine operator has a duty to take remedial action in respect of subsidence caused by the withdrawal of support from land or property in connection with lawful coal mining operations.

When the works are the responsibility of the Coal Authority, our dedicated public safety and subsidence team will manage the claim. The house or land owner (“the owner”) is covered for these works under the terms of the Coal Mining Subsidence Act 1991 (as amended by the Coal Industry Act 1994). Please note, this Act does not apply where coal was worked or gotten by virtue of the grant of a gale in the Forest of Dean, or any other part of the Hundred of St. Briavels in the county of Gloucester.

If you believe your land or property is suffering from coal mining subsidence damage and you need more information on what to do next, please use the following link to our website which sets out what your rights are and what you need to consider before making a claim.

[www.gov.uk/government/publications/coal-mining-subsidence-damage-notice-form](http://www.gov.uk/government/publications/coal-mining-subsidence-damage-notice-form)

## Coal mining hazards

Our public safety and subsidence team provide a 24 hour a day, 7 days a week hazard reporting service, to help protect the public from hazards caused by past coal workings, such as a mine shaft or shallow working collapse. To report any hazards please call 0800 288 4242. Further information can be found on our website: [www.gov.uk/coalauthority](http://www.gov.uk/coalauthority).

# Glossary

## Key terms

adit - horizontal or sloped entrance to a mine

coal mining subsidence - ground movement caused by the removal of coal by underground mining

Coal Mining Subsidence Act 1991 - the Act setting out the duties of the Coal Authority to repair damage caused by coal mining subsidence

coal mining subsidence damage - damage to land, buildings or structures caused by the removal of coal by underground mining

coal seams - bed of coal of varying thickness

future opencast coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal from the surface

future underground coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal underground. Although it is unlikely, remaining coal reserves could create a possibility for future mining, which would be licensed by the Coal Authority

mine entries - collective name for shafts and adits

mine gas - reports of alleged mine gas emissions received by the Coal Authority within the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded

payments to owners of former copyhold land - historically, copyhold land gave rights to coal to the copyholder. Legislation was set up to allow others to work this coal, but they had to issue a notice and pay compensation if a copyholder came forward

shaft - vertical entry into a mine

site investigation - investigations of coal mining risks carried out with the Coal Authority's permission

stop notice - a delay to repairs because further coal mining subsidence damage may occur and it would be unwise to carry out permanent repairs

subsidence claim - a formal notice of subsidence damage to the Coal Authority since it was established on 31 October 1994

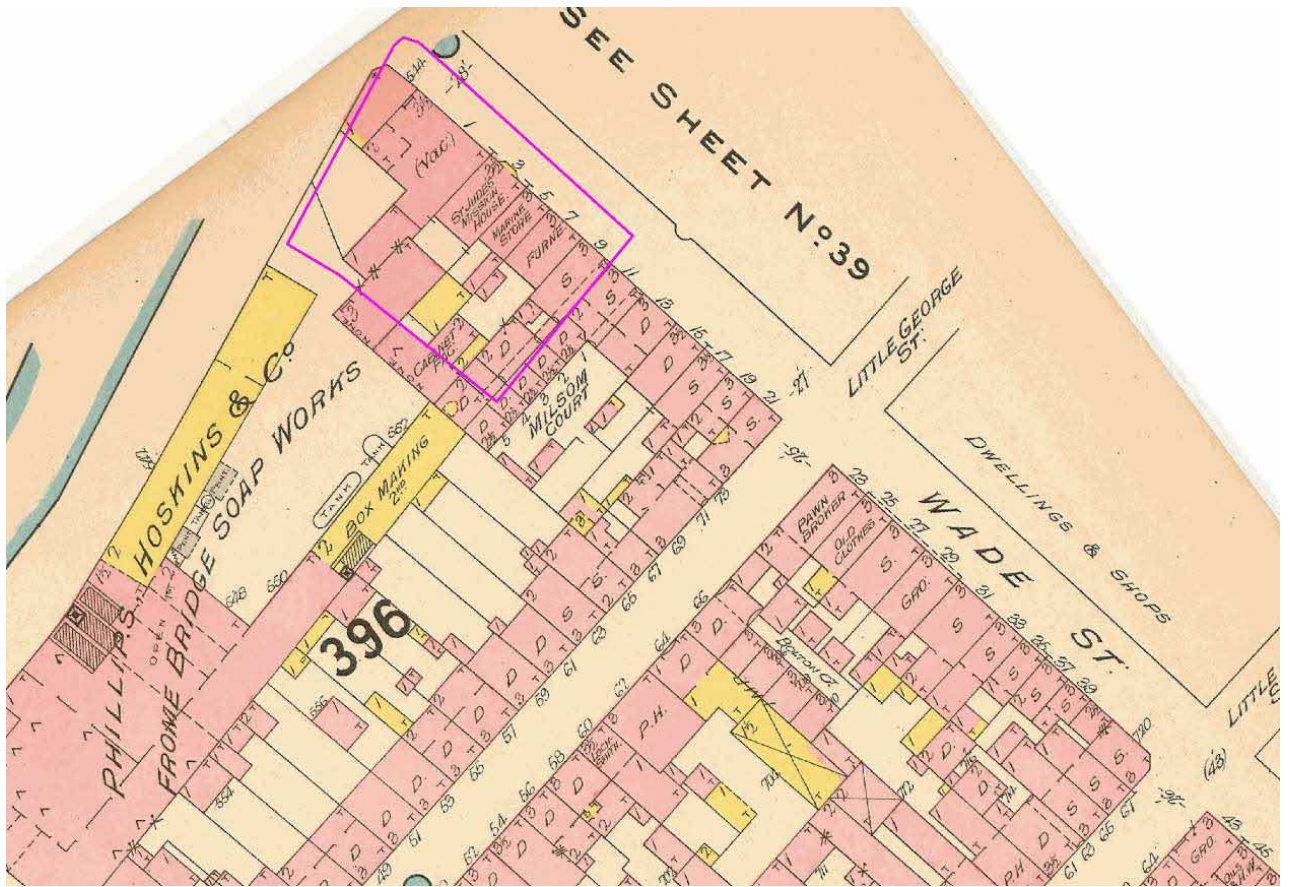

withdrawal of support - a historic notice informing landowners that the coal beneath their property was going to be worked

working facilities orders - a court order which gave permission, restricted or prevented coal mine workings

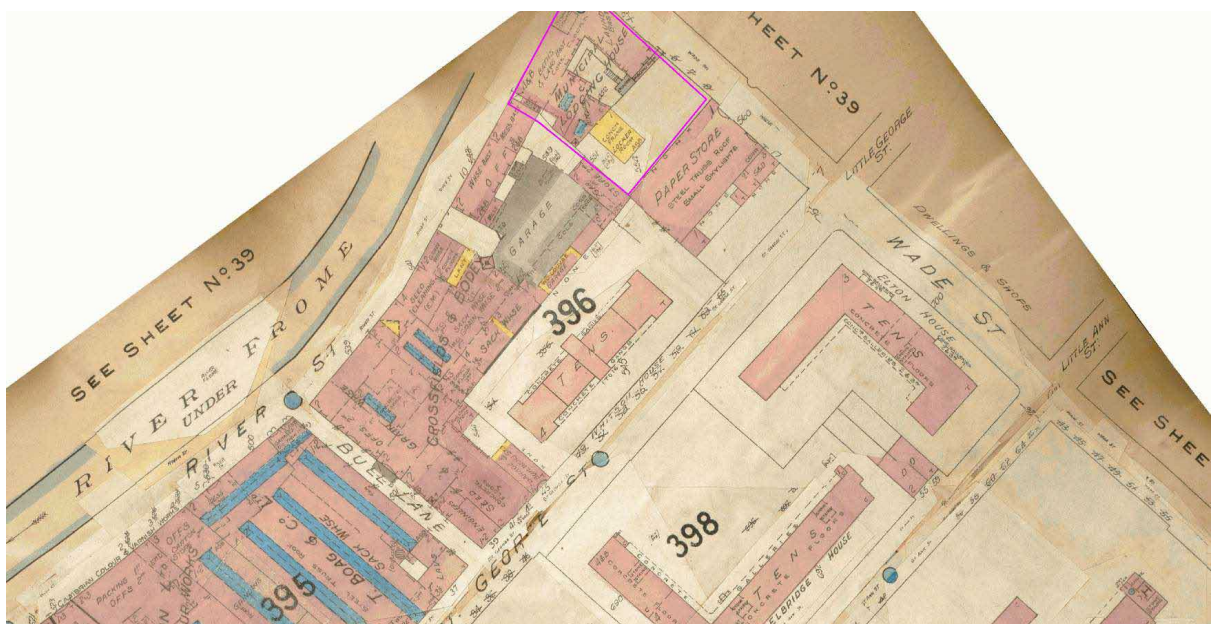

## APPENDIX F

### ENVIROCHECK - HISTORICAL MAPS

MAP DATED 1896

MAP DATED 1961

## Gloucestershire

Published 1884 - 1885

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Gloucestershire

Published 1884

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

# Historical Mapping Legends

## Ordnance Survey County Series 1:10,560

**Pits:** Gravel Pit, Sand Pit, Other Pits  
**Woodlands:** Quarry, Shingle, Orchard, Osiers, Reeds, Marsh, Mixed Wood, Deciduous, Brushwood, Fir, Furze, Rough Pasture  
**Water Features:** Arrow denotes flow of water, Trigonometrical Station, Site of Antiquities, Bench Mark, Pump, Guide Post, Signal Post, Well, Spring, Boundary Post, Surface Level  
**Roads:** Sketched Contour, Instrumental Contour, Main Roads (Fenced/Un-Fenced), Minor Roads (Fenced/Un-Fenced), Sunken Road, Raised Road, Road over Railway, Railway over Road, Railway over River, Level Crossing, Road over River or Canal, Road over Stream, Road over Stream  
**Boundaries:** County Boundary (Geographical), County & Civil Parish Boundary, Administrative County & Civil Parish Boundary, County Borough Boundary (England), County Borough Boundary (Scotland), Rural District Boundary, Civil Parish Boundary

## Ordnance Survey Plan 1:10,000

**Pits & Features:** Chalk Pit, Clay Pit or Quarry, Gravel Pit, Sand Pit, Disused Pit or Quarry, Refuse or Slag Heap, Lake, Loch or Pond, Dunes, Boulders, Coniferous Trees, Non-Coniferous Trees, Orchard, Scrub, Coppice, Bracken, Heath, Rough Grassland, Marsh, Reeds, Saltings, Building, Glasshouse, Sloping Masonry, Pylon, Pole, Electricity Transmission Line  
**Railways:** Cutting, Embankment, Standard Gauge Multiple Track, Standard Gauge Single Track, Siding, Tramway or Mineral Line, Narrow Gauge  
**Boundaries:** Geographical County, Administrative County, County Borough or County of City, Municipal Borough, Urban or Rural District, Burgh or District Council, Borough, Burgh or County Constituency (Shown only when not coincident with other boundaries), Civil Parish (Shown alternately when coincidence of boundaries occurs)  
**Other Symbols:** BP, BS, Ch, CH, F E Sta, FB, Fm, GP, MP, MS, Pol Sta, PO, PC, PH, SB, Spr, TCB, TCP, W, Police Station, Post Office, Public Convenience, Public House, Signal Box, Spring, Telephone Call Box, Telephone Call Post, Well

## 1:10,000 Raster Mapping

**Vegetation & Trees:** Area of wooded vegetation, Non-coniferous trees, Coniferous trees (scattered), Coniferous trees (positioned), Orchard, Coppice or Osiers, Rough Grassland, Heath, Scrub, Marsh, Salt Marsh or Reeds, Water feature, Flow arrows, Mean high water (springs), Mean low water (springs), Telephone line (where shown), Electricity transmission line (with poles), Triangulation station, Bench mark (where shown), Point feature (e.g. Guide Post or Mile Stone), Pylon, flare stack or lighting tower, Site of (antiquity), Glasshouse, General Building, Important Building

## Somerset

Published 1884

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## Ordnance Survey Plan

Published 1955

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. ## Bristol

Published 1972

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

## 10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

## VectorMap Local

Published 2024

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

### Natural England Copyright Notice

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

### Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

### Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

### Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

### Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England.

### Natural Resources Wales Copyright Notice

Contains Natural Resources Wales information © Natural Resources Wales and Database Right. All rights Reserved. Contains Ordnance Survey Data. Ordnance Survey Licence number 100019741.
