

Site Investigation: all okay

The thinning approval given in this licence allows for the removal of up to 30% of the trees of licensable size during this licence period.

All felling sites will be surveyed prior to felling. The survey will locate features that must be avoided so that they are preserved and are not disturbed during felling and extraction of the trees such as: archaeological features, badger setts, bird nests, and sites being used by European protected species.

Timber extraction routes and stacking areas will be pre-selected to minimise damage to the environment.
