PHASE 1: DESK TOP STUDY AND COAL MINING RISK ASSESSMENT

REPORT

PROPOSED CARE HOME

HAMELDON HOUSE

198 ROSSENDALE ROAD

BURNLEY

BD11 5DE

Project No: 23-320

Prepared By:

Ben Edmonds

Date:

18/01/2024

Approved By:

John Ditchburn

Date:

18/01/2023

The information and / or advice contained in this Phase 1: Desk Top Study and Coal Mining Risk Assessment Report is based solely on, and is limited to, the boundaries of the site, the immediate area around the site, and the historical use(s) unless otherwise stated. This 'Report' has been prepared to collate information relating to the physical, environmental, and industrial setting of the site, and to highlight, where possible, the likely problems that might be encountered when considering the future development of this site for the proposed end use. All comments, opinions, diagrams, cross sections and / or sketches contained within the report, and / or any configuration of the findings is conjectural and given for guidance only and confirmation of the anticipated ground conditions should be considered before development proceeds. Agreement for the use or copying of this report by any Third Party must be obtained in writing from Arc Environmental Limited (ARC). If a change in the proposed land use is envisaged, then a reassessment of the site should be carried out.

1.0 Introduction

January 2024

Arc Environmental Limited were instructed by Dudleys, to undertake a Phase 1: Desk Top Study (DTS) & Coal Mining Risk Assessment (CMRA) Report, for Hameldon House, 198 Rossendale Road, Burnley where it is proposed to demolish the existing care home and construct a new care home, including soft landscaping, allotments, and a car park.

The primary objectives of this report are to assess the geological, geotechnical, and potential ground contamination conditions on and beneath the surface of this site. The Phase 1: DTS and CMRA Report has been carried out generally in accordance with the EA (Environment Agency) guidance for Land Contamination Risk Management (LCRM: October 2020). Based on all the data reviewed, a preliminary Conceptual Site Model (CSM) has been developed to define the scope and extent of any further investigation works deemed necessary, prior to commencing with any future development works.

A site reconnaissance (walkover) survey was completed as part of this study with site photographs included within Appendix I, and all relevant observations noted in Section 2.1 below.

2.0 Physical Setting

2.1 Site Details: -

Table 2.1

Site Name & Address:	Hameldon House, 198 Rossendale Road, Burnley, BB11 5DE
National Grid Reference:	382040 431700 (Representative of the central part of the site).
Description of Location:	The site is located c.1.8km west of Burnley Town Centre on Rossendale Road. The site is accessed off Rossendale Road (on foot) and Harold Avenue (vehicular). It comprises a derelict care home with trees and surrounding hard and soft landscaping.
Site Boundaries:	N = Residential and commercial properties with Harold Avenue beyond, E = Residential properties, S = A646 (Rossendale Road) with an Industrial Estate beyond, SW = A646 with a service station beyond, W = The junction of A646 and Harold Avenue.
Site Shape:	The site is irregular in shape and occupies a total area of c.0.21 H.
General Topography:	The site is relatively level at c.164.9 m (AOD).
Above Ground Structures	The site currently comprises a derelict care home with multiple trees surrounding the building. On the northeast portion of the site is a garden area / allotment.
Below Ground Services:	A culverted watercourse traverses the central portion of the site from southeast to northwest. There is a basement below the western portion of the former care home which is a boiler room. Other potential services are anticipated beneath the site associated with the on site and adjacent developments.
Summary of Historical Site Information:	The earliest historic maps record a stream traversing the site along with a footpath (c.1848) the stream it then culverted and multiple walls are built around the site between c.1912 to c.1931. One of the walls on the sites eastern portion is no longer recorded and a garden is recorded on the eastern portion of the site in its place (c.1938 to c.1965). Hameldon house is then recorded covering the site (c.1970 to c.1988) from then there are no significant changes to the site up to present day.
Site Surfacing:	The site surfacing includes hard over comprising asphalt and concrete, there is also soft landscaping comprising grass and soils.

3.0 Environmental Setting

3.1 Site Geology: -

The geological assessment for this site has been based on geological plans and digital online data published by the British Geological Survey (BGS). The following documents have been reviewed as part of this study: -

Online BGS Geology of Britain Viewer
BGS SD83SW 1:10,000 scale, 2007
BGS Sheet 76, Rochdale, Bedrock, 1:50,000 scale, 2008
GeoIndex Online CA Interactive Map Viewer
BGS Boreholes (SD83SW106, SD83SW107)
Coal Authority Online Interactive Map Viewer
Coal Consultants Coal Mining Report; 51003393885001
Envirocheck Report (Ref. 327697642_1_1)

3.1.1 Made Ground: -

In accordance with the published BGS maps, the site is not within an area of recorded made ground whilst the land to the immediate west and south of the site is recorded as landscaped ground. Made ground is anticipated associated with the current development and the culverted water course which traverses the site trending southeast to northwest plus the existing basement.

3.1.2 Superficial Deposits: -

The superficial deposits comprise Glacial Till (undifferentiated) deposited during the Pleistocene Epoch (Devensian), comprising silty clay and pebbles.

Historic boreholes (SD83SW106 / 107) located c.200m –c.250m to the west of the site have recorded shaly clay to at least c.3.5m below ground.

3.1.3 Solid Geology: -

According to published BGS data, the site is underlain by the Pennine Lower Coal Measures Formation (PMCM) deposited during the Carboniferous Period (Langsettian). These deposits typically comprise interbedded grey mudstones, siltstone, pale grey sandstone, and numerous productive coal seams.

Historic boreholes (SD83SW106 / 107) located c.200m –c.250m to the west of the site have recorded dark grey sandstones, mudstones, and siltstones to a depth of at least c.47m bgl.

3.2 Coal Mining Risk Assessment: -

According to the Coal Authority (CA) Online Interactive Map Viewer, the site lies within a Coal Mining Reporting Area, and within a defined 'Development High Risk Area' (DHRA), an 'Area of Past Shallow Coal Mine Workings' and 'Probable Shallow Mine Coal Workings' although there are no mine entries (shafts) within proximity to the site.

To assist with the risk assessment, a Coal Authority Consultants Coal Mining Report (Ref. 51003393885001) was obtained for this site, a copy of which is attached in Appendix III.

3.0 Environmental Setting (Cont'd)

3.2 Coal Mining Risk Assessment (Cont'd): -

From information included within the Consultants Coal Mining Report, the shallowest recorded workings beneath the site are within the Arley coal seam at c.110m bgl, last worked in 1870 and recorded locally up to c.1.2m thick.

According to CA report and BGS data the shallowest recorded named coal seam below the site is Yard Bottoms aka China Coal (c.0.20 - 0.70m thick) which subcrops in the southern portion of the site dipping to the north orientated at 270 degrees

The Crackers Coal (0.3m to 0.8m thick) is the next named seam in the geological sequence and recorded at c.25m below the China Coal and therefore is not considered to represent a risk to the site if worked.

The CA report confirms there are probable unrecorded shallow mine workings below the site. There are no mine entries (shafts or adits) within c.100m of the site and there has been no claims of coal mining subsidence within c.50m of the site boundary.

The CA report confirms that there are no spine roadways recorded at shallow depths, no remediated sites or mine gas emissions within c.500m of the site boundary. There are no recorded gas incidents, that required investigation and remediation by the Coal Authority to mitigate the effects of the mine gas emission. However, a site investigation has been undertaken c.20m to the southwest of the site for a service station.

The site does not lie within the Cheshire Brine Subsidence Compensation District, therefore the risk to subsidence due to brine extraction is considered negligible.

In accordance with CLAIRE Good Practice for Risk Assessment for Coal Mine Gas Emissions, October 2021, figure 13.1 decision support tool for mine gas risk assessment the site is considered to be at low risk from potential mine gases.

When considering the above, in the context of the development proposal, further assessment by means of intrusive investigation works is required with regard to potential shallow unrecorded coal workings in the China Coal seam, and mine gas.

3.3 Potential Geological Hazards: -

Table 3.1

Potential Geological Hazard:	Hazard Potential
Land Slip:	Very low risk.
Shrinkable Soils:	Very low risk.
Collapsible Soils:	Very low risk.
Compressible Soils:	No hazard.
Running Sand:	Very low.
Ground Dissolution:	No hazard.

3.4 Site Hydrogeology: -

The site is not recorded on or within c.1km of a Source Protection Zone (SPZ).
There are no water abstractions recorded within c.500m of the site boundary.

3.0 Environmental Setting (Cont'd)

3.4 Site Hydrogeology (Cont'd): -

Table 3.2

<u>STRATA</u>	<u>Aquifer / Soil Leachability EA Classification</u>	<u>Comments</u>
Groundwater Vulnerability:	Secondary Superficial Aquifer: low vulnerability.	Productive Bedrock Aquifer, Productive Superficial Aquifer Pollutant Speed: Low Bedrock Flow: Well-connected fractures Dilution: >550mm/year Superficial thickness: 3-10m
Superficial Aquifer: (Till, Devensian)	Secondary Aquifer – Undifferentiated.	It is not possible to apply either a secondary A or B definition because of the variable characteristics of the rock type. These have only minor value.
Bedrock Aquifer: (Pennine Lower Coal Measures Formation)	Secondary Aquifer – A.	An aquifer comprised of permeable layers that can support local water supplies and may form an important source of base flow to rivers.

3.5 Site Hydrology: -

Table 3.3

<u>SURFACE WATER FEATURE</u>	<u>Location</u>	<u>Comments</u>
OSWater Network & GOA Classified River:	Six recorded within c.250m.	EC Ref. 76 is a culverted watercourse that traverses the site from southeast to northwest. EC Ref. 77 is a lake c.54m to the northwest of the site. EC Ref. 78 is a river running out of the lake c.66m to the northwest of the site. EC Ref. 79 & 80 relate to EC Ref. 78 c.121m to c.161m to the northwest of the site. EC Ref. 81 is the stream that is culverted under the site c.211m to the southeast.
Unclassified Watercourse(s), Canals, Ponds, Lakes & Other Bodies of Water:	None recorded within c.250m.	~
Flooding from River or Sea: (Fluvial)	The site does not lie within a flood zone that is susceptible to fluvial / tidal flooding.	The EA considers the site to be in an area with a very low risk of fluvial flooding (<0.1% annual chance). The whole of the site is categorised in a Flood Zone 1 (with a low probability of flooding from rivers).
Surface Water Flooding: (Pluvial)	The published EA data infers the majority of the site is at low risk of pluvial flooding though portions of the site lie within very low and high risk.	The EA considers the majority of the site to be in an area with a low risk of pluvial flooding (0.1 to 1% annual chance). However, the southern portion of the site is recorded as being in an area of high risk of pluvial flooding (>3.3% annual chance) and the northern portion of the site is recorded as being in an area of very low risk of pluvial flooding (<0.1% annual chance).
Groundwater Flooding at Surface (BGS):	The site is recorded within an area where there is a potential for groundwater flooding to occur below the ground level.	Information obtained from landmark, including published maps indicating the potential for groundwater flooding below ground level, proposed by the British Geological Survey (BGS). This information is based on areas which may be potentially influenced by geological factors.

3.0 Environmental Setting (Cont'd)

3.5 Site Hydrology (Cont'd): -

Table 3.3 (Cont'd)

RAINFALL	Measurements (mm)	Comments
Annual:	1314.51	Based on station average measurements from Stonyhurst during 1991 to 2020.
Rainfall: Min (Apr)	65.44	
Rainfall: Max (Dec)	159.36	

3.6 Radon Assessment: -

According to the Envirocheck Report, the site is recorded to lie in a lower probability radon area, where less than 1% of homes are above the action level, in accordance with the BGS, National Geoscience Information Service, and their assessment suggests that no radon protection measures are necessary for the site. The BRE Digest, BR211 (2015) Radon: Guidance on Protective Measures for New Buildings, records the site to be situated within a clear grid square (1km), and therefore no radon protection measures are required for the site.

With reference to BGS / UK Radon mapping (dated December 2022), the site falls in a 1km grid square where some parts are in bands of elevated radon potential of 1-3% above the action level.

3.7 Site Ecology: -

Table 3.4

FEATURES	Location	Comments
Local Nature Reserves:	None recorded within c.250m.	~
Areas of Adopted Green Belt:	None recorded within c.250m.	~
Special Protection Areas:	None recorded within c.250m.	~
Nitrate Vulnerable Zone:	One recorded on site.	These are areas of land that drain into nitrate polluted waters, or water that could become polluted by nitrates. This will need to be taken into consideration with the proposed allotments on the eastern portion of the site.
World Heritage Sites:	None recorded within c.250m.	~

There was no visual evidence to suggest that the site is affected by the presence of invasive weed species such as Japanese Knotweed, Giant Hogweed or Himalayan Balsam, at the time of the recent site survey, although a site-specific survey has not been carried out. Therefore, site awareness during future investigation works and during the construction phase for any potential invasive weed species would be considered prudent.

3.8 Estimated Soil Chemistry: -

Data provided by the BGS in relation to estimated soil chemistry for several key metals and metalloid elements is summarised in Table 3.5 below. Note: the references to the anticipated background concentrations of contaminants, sourced from the BGS, should not be relied upon. They are not site-specific and do not represent the condition of the ground at the proposed development site.

Table 3.5

Element	Soil Sample Type	Estimated Soil Concentrations (mg/ kg)
Arsenic	Sediment.	< 15
Cadmium	Sediment.	< 1.8

3.0 Environmental Setting (Cont'd)

3.8 Estimated Soil Chemistry (Cont'd): -

Table 3.5 (Cont'd)

Element	Soil Sample Type	Estimated Soil Concentrations (mg/ kg)
Chromium (total)	Sediment.	60 – 90
Lead	Sediment.	< 100
Nickel	Sediment.	15 – 30

4.0 Industrial Setting: -

4.1 Site History: -

Copies of historical OS maps covering the site area & adjacent land are included in Appendix III and a summary of the site history based on these plans, is provided in Table 4.1 below and the following page.

Table 4.1

Significant features / potential contamination sources highlighted in **bold**.

Date	Site	Adjacent Areas
c.1848 to c.1893	The site is recorded as being a field with a stream traversing the site from southeast through the centre of the site to the northwest. A footpath is recorded on the northeast portion of the site.	To the north of the site there are Coke Ovens with three reservoirs recorded c.150m from the site. To the east of the site there are fields recorded. To the southeast of the site multiple farms are recorded. To the south of the site there is road running along the site boundary with residential houses beyond. To the west of the site there is a road running northwest away from the site with a field beyond. To the northwest of the site the stream continues and there are residential houses recorded c.70m from the site with a railway c.140m beyond them.
c.1912 to c.1931	The stream running through the site is culverted under the site.	To the north of the site Harold Avenue is recorded with residential houses beyond. The Coke Ovens to the north of the site are recorded as disused.
c.1938 to c.1965	There are no significant changes to the site.	To the north of the site housing is recorded. The Coke Ovens and reservoirs are no longer recorded. To the immediate east of the site residential houses are recorded. To the southwest a works is recorded c.40m north of the site. To the northwest of the site residential houses are recorded c.20m from the site.
c.1970 to c.1988	Hameldon House occupies the site by c.1970	The housing c.100m from the site is no longer recorded. A depot is recorded c.120m southeast of the site. An electric substation is recorded c.20m south of the site with multiple works beyond recorded c.80m from the site. An engineering works is recorded c.140m west of the site.
c.1993 to c.2001	There are no significant changes to the site.	The engineering works to the west of the site and the works to the south of the site now form part of a larger industrial estate .
c.2023 (present day)	The site is vacant with Hameldon House boarded up.	There are no significant changes to the surrounding area.

4.0 Industrial Setting (Cont'd): -

4.2 Statutory Requirements / Authorisations: -

Table 4.2

TYPE	Location	Comments
Enforcement and Prohibition Notices:	None recorded within c.250m.	~
Integrated Pollution Controls:	None recorded within c.250m.	~
Local Authority Pollution Prevention and Controls:	Two recorded within c.250m.	Both the entries relate to the Local Authorities Air Pollution Control. EC Ref. 10 relates to Rossendale Road Service Station, c.30m to west of the site, Status: Authorised. EC Ref. 11 relates to Porters Gate Colliery c.179m to the northeast of the site, Status: Authorisation Revoked.
Prosecutions Relating to Authorised Processes:	None recorded within c.250m.	~
Registered Radioactive Substances:	None recorded within c.250m.	~
COMAH/ Explosive/ NIHHS Sites:	None recorded within c.250m.	~
Planning Hazardous Substances Consents / Enforcements:	None recorded within c.250m.	~
Contemporary Trade Entries:	Numerous recorded within c.250m.	17 no. within c.250m of the site with 12 no. of the contemporary trade entries have a status of inactive within c.250m of site. The nearest active entry is EC Ref. 230 Texaco Service Station c.30m from the site to the west.
Fuel Station Entries:	One recorded within c.250m.	EC Ref. 307 Rossendale Road Service Station c.30m to the west of the site.
Points of Interest:	Numerous recorded within c.250m.	<p>Commercial services: - 5 no. recorded within c.250m of site with EC Ref. 311 a car wash c.30m to the west of the site being the closest entry to the site.</p> <p>Manufacturing and production: - 4 no. recorded within c.250m of site with EC Ref. 341 an industrial estate c.90m to the south of the site being the closest entry to the site.</p> <p>Public Infrastructure: - 8 no. recorded within c.250m of the site with two entries recorded under EC Ref. 367 relating to Rossendale Service Station c.30m to west of the site.</p> <p>Recreational and Environmental: - 1 no. recorded within c.250m of the site with EC Ref. 380 relating to a skatepark c.162m to the northwest of the site.</p>

4.3 Landfill & Waste: -

The following information below relating to landfill and waste has been obtained from the Envirocheck Report (attached in Appendix III) site walkover and published data:

There is one Historical Landfill Sites, two Local Authority Landfill Coverage, and one Local Authority Recorded Landfill site recorded within c.250m of the site to the north of the site relating to a former Coke Oven site.

There are no Integrated Pollution Control Registered Waste Sites, Local Authority Recorded Landfill Sites, Registered Waste Transfer, BGS Recorded Landfill, Licensed Waste Management Facilities (landfill), Areas of Potentially Infilled Land (Water), Licensed Waste Management Facilities (locations) Waste Treatment or Disposal sites, Registered Landfill sites, Coal Authority Managed Tips recorded within c.250m of the site.

4.0 Industrial Setting (Cont'd): -

4.3 Landfill & Waste (Cont'd): -

There is one area of potentially infilled land (Non-Water) recorded c.110m to the north of the site correlating with the former Coke Ovens.

Made ground (construction waste) is expected beneath the site, associated with the current development which includes a basement.

Made ground will also be present along the route of the culverted watercourse.

BGS maps record an area of landscaped ground to the west and south of the site where the land has been raised and levelled.

Following a review of OS maps and other site-specific data, the risk of hazardous ground gas production / migration is considered to be moderate. Therefore, an intrusive investigation with the installation of wells within boreholes for gas monitoring as governed by CIRIA C665 / BS8485:2015+A1:2019 is recommended.

4.4 Unexploded Ordnance (UXO) Risk: -

According to the Unexploded Bomb Risk Map produced by ZeticaUXO, the site lies within a low-risk area in terms of unexploded ordnance (areas indicated as having 15 bombs per 1000acre or less). Therefore, a detailed UXO report is thought not to be required. A copy of the ZeticaUXO Unexploded Bomb Risk Map can be seen attached in Appendix IV.

4.5 Pollution Incidents and Discharge Consents: -

Table 4.3

<u>TYPE</u>	<u>Location</u>	<u>Comments</u>
Discharge Consents:	None recorded within c.250m.	~
Prosecutions Relating to Controlled Waters:	None recorded within c.250m.	~
Pollution Incidents to Controlled Waters:	6 no. recorded within c.250m.	<p>EC Ref. 21 was a Category 3 – minor incident, c.9m west of the site involving unknown sewage in the tributary.</p> <p>Three entries are recorded under EC Ref. 22 which are all Category 3 –minor incidents, between c.79m to c.85m to the northwest of the site involving oils and crude sewage into the tributary.</p> <p>EC Ref. 23 was Category 3 –minor incident, c.144m northwest of the site involving crude sewage into the tributary.</p> <p>EC Ref. 24 was a Category 3 –minor incident, c.231m to the west of the site involving a spillage of nitric acid.</p>
Substantiated Pollution Incident Register:	3 no. recorded within c.250m.	<p>All the entries are recorded under EC Ref. 66 being between c.60m to c.102m to the northwest of the site.</p> <p>Incident reference: 2126300, Water impact: Category 2 – Significant Incident, Air impact: Category 4 –No Impact, Land impact: Category 4 –No Impact, Pollutant: Not Identified.</p> <p>Incident reference: 837486, Water impact: Category 2 – Significant Incident, Air impact: Category 3 –Minor Incident, Land impact: Category 3 –Minor Incident, Pollutant: Oils and Fuels.</p> <p>Incident reference: 72725, Water impact: Category 2 – Significant Incident, Air impact: Category 4 –No Impact, Land impact: Category 4 –No Impact, Pollutant: Contaminated water.</p>

4.0 Industrial Setting (Cont'd): -

4.5 Pollution Incidents and Discharge Consents (Cont'd): -

Water Industry Act Referrals:	No ne recorded within c.25 0m.	~

5.0 Conceptual Site Model (CSM)

The Conceptual Site Model (CSM) is one of the primary planning tools that can be used to support the decision-making process of managing contaminated land and groundwater on any given site and allows a better understanding of what needs to be done to achieve risk management, and from this appropriate remediation techniques, if required for those risk management goals can be chosen.

This can be done by undertaking a *source-pathway-receptor* analysis of the site. The anticipated sources, pathways and receptors for this site are summarised in Table 5.1 below and are a graphical representation of the preliminary CSM has been produced for this site and is attached in Appendix V.

Table 5.1

*= Not included in the Human Health & Controlled Waters Risk Assessment.

	<i>Sources (S)</i>		<i>Pathways (P)</i>		<i>Receptors (R)</i>
S1	Made ground associated with site development and culverted watercourse.	P1	Ingestion & Dermal Contact.	R1	Human health - future end users and construction workforce.
S2	Possible Hazardous ground gas associated with infilled land, historic landfills, made ground and mining activities (possible mine gas migration).	P2	Plant uptake and attached soils.	R2	Controlled Waters: Groundwater within the underlying solid geology (Secondary Aquifer –A) and superficial deposits (Secondary Aquifer – Undifferentiated).
		P3	Air-inhalation of vapours and direct contact with dust.		
		P4	Migration through existing services / permeable strata.		
		P5	Direct contact with building Materials.	R3	Adjacent sites.
		P6	Surface runoff, infiltration & leachate migration.	R4*	Building materials.
				R5*	Flora and fauna.

5.1 Geotechnical Considerations: -

The following potential geotechnical issues and hazards have been identified for this site, and these issues should be considered before future development of the site is to take place:

Type, variability, and condition of made ground deposits across this site.

Geotechnical parameters of the natural superficial soils.

Control of surface water drainage.

Possible unrecorded shallow mine workings in the China Coal Seam.

The presence of buried services and subsurface structures including a basement and culverted water course.

Stability of excavations within any natural granular deposits and made ground present.

The information reviewed indicates that the site can be considered as being located within a **MODERATE to HIGH** geotechnical risk setting for the intended development outlined.

5.0 Conceptual Site Model (CSM) (Cont'd)

5.1 Geotechnical Considerations (Cont'd): -

To determine the geotechnical considerations above with more certainty, it is recommended that a programme of intrusive geotechnical investigation works is undertaken on this site with associated in-situ geotechnical testing, to aid in assessing the extent of any potential issues prior to commencing with any development in the future, if any proposed structures, buildings etc.

5.2 Sources of Contamination and Probable Contaminants

Considering the recorded site history, in accordance with published OS maps within the Landmark Envirocheck Report, and taking into consideration the proposed development, the following primary potential on site contamination issues have been identified for this site;

Made ground associated with current development.

Hazardous Ground Gas associated with the potential shallow coal mine working, historic landfills, and infilled ground in proximity to the site.

5.2.1 Soils –Human Health: -

In consideration of the above it would be prudent to test selected samples of soil from this site for the following analytes:

Generic contamination suite, typically comprising; Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel, Selenium, Zinc, Total Organic Carbon, (TOC) and pH.

Asbestos screening (and quantification if encountered).

Speciated Polyaromatic Hydrocarbons (PAHs), Total Petroleum Hydrocarbons (TPHs & BTEX).

Waste Acceptance Criteria (WAC) testing may be required to aid with off-site disposal.

It is considered the level of risk posed to human health and local environ overall in connection with any future commercial development is s below

The information reviewed indicates that the site can be considered as being located within a **LOW** ground contamination risk setting for Human Health.

5.2.2 Controlled Waters: -

The issues below have been taken into consideration when assessing the risks towards Controlled Waters:

The site is not recorded as being in or within 1km of a Source Protection Zone (SPZ).

There are no water abstractions recorded on or within c.500m of the site boundary.

There is one below ground water feature a culverted water course which runs below site.

The superficial geology is a Secondary Aquifer –Undifferentiated (Glacial Till)

The solid geology is a Secondary Aquifer –A (Pennine Lower Coal Measures Formation).

The information reviewed indicates that the site can be considered as being located within a **MODERATE** ground contamination risk setting for Controlled Waters.

6.0 Recommendations for Phase 2: Ground Investigation Works

The conclusions contained within this report have been based on a review of geological plans, historical plans and available environmental data relating to the site and nearby adjacent land and forms the basis of a preliminary risk assessment. The primary benefits of undertaking this report are as follows:

- (i) Identify the geotechnical and/or geoenvironmental characteristics of the ground in sufficient detail to quantify the ground contamination risk at the site and for the economic design of any future site / proposed development, construction or associated remedial works.
- (ii) Minimise the risk of unforeseen ground conditions which might cause increased costs and / or programme (construction) delays later.

When considering the current development proposals, it is recommended that a programme of Phase 2: Ground Investigation (intrusive investigation) works are completed for this site to provide an assessment of the geo-environmental characteristics of the site. These intrusive investigation works should be completed prior to commencing with any future development works and should include for the following or a similar scope of investigation works:

A series of windowless sampling boreholes should be undertaken, including in-situ geotechnical testing (SPT testing, etc.) and sampling to help aid with future foundation design for the proposed development and to collect samples for subsequent laboratory testing.

A series of 15m –20m rotary borehole to check for probable shallow coal working in the China Coal.

If deep made ground and / or geotechnically poor natural superficial materials are encountered, cored rotary boreholes will be required to assist with piled foundation design.

Installation of combined ground gas and groundwater monitoring wells accompanied by an appropriate number of monitoring visits (in accordance with CIRIA C665 & BS8485), to determine the ground gas and groundwater regime below the site.

Laboratory geotechnical testing (i.e., liquid and plastic limit testing, PSDs, pH & soluble sulphate testing, etc.)

Laboratory contamination screening on selected samples recovered from the investigation positions for typical contaminants as detailed in Section 5.2 to assess the risks to Human Health. Samples of soil collected will be forwarded to UKAS and MCERTS accredited laboratory to undertake the recommended testing.

Leachate / groundwater testing if deemed necessary to assess any risk to Controlled Waters.

Interpretive Phase 2: Ground Investigation Report, including a Ground Contamination Risk Assessment.

Prior to site investigation works commencing on site, all existing utilities / services should be identified and recorded, such that any potential damage to services crossing the site can be prevented, as well as ensuring the health and safety of future site workers. If any buildings / structures are proposed, then a reassessment of the above scope of works would be required.

The samples of soil collected should be forwarded to UKAS and MCERTS accredited laboratory to undertake the recommended testing.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Lancashire And Furness
Published 1893
Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Burnley

Published 1976

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping
Published 2001
Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

10k Raster Mapping
Published 2006
Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local
Published 2023
Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

APPENDIX IV

Zetica Unexploded Bomb Risk Map

UNEXPLODED BOMB RISK MAP

SITE LOCATION

Map Centre: 382030,431698

This map principally indicates a hazard from Unexploded Bombs (UXB) due to WWII bombardment. Other sources of Unexploded Ordnance (UXO) may be present. It should be noted that this map does not represent UXO risk and should not be reported as such when reproduced.

LEGEND

- High:** Areas indicated as having a bombing density of 50 bombs per 1000acre or higher.
- Moderate:** Areas indicated as having a bombing density of 15 to 49 bombs per 1000acre.
- Low:** Areas indicated as having 15 bombs per 1000acre or less.

How to use your Unexploded Bomb (UXB) risk map?

This map indicates the potential for UXBs to be present because of World War Two (WWII) bombing. It can be incorporated into a technical report, such as a Phase 1 Desk Study, or similar document as an indication of the potential for UXO encounter on a Site. Other sources of UXO may also be indicated, although note that these are not comprehensive and more detailed research is required to confirm their presence.

What if my Site is in a moderate or high density area?

We typically recommend that a detailed UXO desk study and risk assessment is undertaken for sites in an area with a moderate or high bombing density. Additionally, if your site is in close proximity to a strategic target, military establishment, airfield or bombing decoy, then [additional detailed research](#) is recommended.

If my site is in a low risk area, do I need to do anything?

If both the map and other research confirm that there is a low potential for UXO to be present on your site, then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

If you are unsure whether other sources of UXO may be present, you can request one of our [pre-desk study assessments \(PDSA\)](#) by emailing a site boundary and location to uxo@zetica.com.

You should never plan site work or undertake a risk assessment using these maps alone. More detail is required, to include an assessment of the likelihood of a source of UXO hazard from other military activity not reflected on these maps.

If I have any questions, who do I contact?

tel: +44 (0) 1993 886682 email: uxo@zetica.com web: www.zeticauxo.com

The information in this UXB risk map is derived from a range of sources and should be used with the [accompanying notes on our website](#).

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgement. The copyright remains with Zetica Ltd.

 Conceptual Site Model

Scale of A3: NTS @ A3 | Date: 19.12.23 | Drawn by: P.D | Approved by: B.E

Job Ref: 23-320 | Drg no: - | Rev: -

MADE GROUND:
 In accordance with the published BGS maps, the site is not within an area of recorded made ground however the land to the immediate west and south of the site is recorded as landscaped ground. Made ground is anticipated associated with the current development and the culverted water course which traverses the site trending southeast to northwest

DRIFT DEPOSITS:
 The superficial deposits comprise Glacial Till (undifferentiated) deposited during the Pleistocene Epoch (Devensian), comprising silty clay and pebbles. Historic boreholes (SD83SW106 / 107) located c.200m - c.250m to the west of the site have recorded shaly clay to at least c.3.5m below ground

SOLID GEOLOGY:
 According to published BGS data, the site is underlain by the Pennine Lower Coal Measures Formation (PMCM) deposited during the Carboniferous Period (Langsettian). These deposits typically comprise of interbedded grey mudstones, siltstone, pale grey sandstone, and numerous thick coal seams. Historic boreholes (SD83SW106 / 107) located c.200m - c.250m to the west of the site have recorded dark grey sandstones, mudstones, and siltstones to a depth of at least c.47m bgl
