

Dear Debbie,

please find attached the 1 : 1250 site location plan you requested. I trust you have looked at the drawings particularly the section which obviously indicates that we are only lifting the roof height. with regard to the scale it is as stated 1 : 100  
this is quite easy to check if you read the height of the new eaves which is 7000mm using a 1 : 100 scale rule you will see that it scales correctly . you can then use the 1 : 100 scale rule to check any measurement you may require  
My client is paying the planning fee as requested directly. I will confirm that it has been paid. if you still require a scale bar please let me know but it will not change what is drawn  
Regards Ron Oliver
