

Section 01 — 1.50

Section 02 — 1.50

At building services, underground and overhead should be located and surveyed as required.
 Prior to works commencing on site drainage design should be investigated on site and a CCTV scan should be completed of existing drains. If drains are proposed over or near a neighbouring property or which are deemed to be affected then the relevant application should be completed to the local water board (sewerage only).
 At drawings to be read in conjunction with supporting documentation (as defined within plans).
 Ground conditions for foundations to be reviewed and confirmed on site by contractor and agreed with structural engineer prior to works proceeding.
 Contractor to complete Construction Phase Plan and relevant FTA submission to HSE. Contractor to complete and maintain an up to date health and safety file during the construction phase of works.
 All relevant party well agreements to be put in place by client and checked by contractor prior to works proceeding on site.
 Contractor to ensure that all relevant government guidelines regarding health and safety are fully adhered to during any construction works or meetings.
 All dimensions are to be checked on site and Studio Drake LTD to be notified of any discrepancies. Written dimensions are to be followed unless otherwise stated. Dimensions are taken from drawings. This drawing is copyright and cannot be reproduced without prior written consent from Studio Drake LTD.
