1.0 JUSTIFICATION

The previously approved pier protection (2100883LBC) was removed from the main entrance gate piers in order to clean the stonework and the left hand pier and curved wall were damaged by vehicles accessing the site. This occurred during the construction to the various buildings within the grounds of Wormington Grange. As a result of this accident we are proposing to rebuild the stone work to the left hand pier and curved wall from the plinth up, including the repair and reinstatement to the metalwork on the curved section of the wall. This is to ensure both are once again structural sound whilst ensuring a low impact on the existing listed entrance gate pier and curved wall. The right hand side was undamaged by the accident and will therefore remain as existing.
