

## Drainage Statement

Site is to be served via. a new drainage system. The foul water is to be treated via. a septic tank with outflow to a new soakaway. The surface water is to be taken to an new soakaway. All drainage will be fully designed by qualified engineers ensuring drainage run off from site is no greater than current house. As the extension to the house is vertically only the roof surface area is exactly the same as before thus by diverting all surface water to new soakaways we are improving the existing situation.
