

- The contents of this drawing are copyright.
- Planning drawings are only to be used for planning purposes & no reliance on compliance with building regulations should be observed.
- Do not scale. Figured dimensions only to be used.
- Contractors must verify all dimensions and report any discrepancies before putting work in hand or making any shop drawings.
- All flat roofs to be fitted with a man safe system to satisfy CDM 2015 regulations unless written confirmation from Principle Designer/ Principal Contractor for regs. compliance and signing, prior to construction/ ordering. Dimensions to be checked before fabrication.
- Masterson waterproofing specialists (or similar company with relevant PFI insurance) to be instructed and detail of basement waterproofing designs. - ARC carry no responsibility of PFI cover for basement design in terms of waterproofing or structure in any way.
- A design and risk assessment should form part of our drawing package. If you have not received this from us by post, email or collection please contact us for a copy before moving forward with the project.
- We do not take responsibility for the depicted site ownership boundary. Clients must notify us if they feel the our plans do not accurately depict their ownership or area of control for planning purposes.
- We do not take responsibility for meeting minimum space as setout in Government Technical housing standards - nationally described space standards document.
- All Cladding & building attachments externally to be all A1 fire rated.
- NOTE: We do NOT take any responsibility and do not carry any PFI cover in relation to any matters relating to the safety Part 8 building regulations, BS 5991 for fire or EWS1 test otherwise in no way form a fire strategy/ report. All design details relating to Fire Safety are shown for indicative purposes only and should be read in conjunction with the latest version of the Appointed Fire Consultant Fire Strategy Document/ Report - all information contained in such a report supersedes ARC drawings in all aspects. No assumption of any responsibility is accepted, if you are unaware who the appointed fire consultant is or don't have a copy of the latest version of the report please contact arc in writing immediately.**
- EWS1: an independent and an appropriately qualified and insured fire consultant/engineer should be appointed by the client/contractor to ensure the finished project is compliant. Some mortgage companies require EWS1 on buildings outside of the EWS1 standard criteria.
- Part 8 & Fire Safety: An independent and appropriately qualified fire consultant should be instructed by the client/contractor at the earliest possible point in the design process to ensure compliance with Part 8 & fire safety. Please note that subject to a fire consultant confirmation/input the following points may be required in some or all areas of the building: 1) Sprinkler systems (Domestic or commercial) 2) Mechanical smoke extraction 3) Fixed shut fire safety glass 4) some sprinkler systems require large holding tanks 5) plan changes in relation to the safety could result in loss of usable floor area and potential requirement for additional planning applications. (this list is not exhaustive)

DESIGNERS RISK ASSESSMENT

Building Products and Construction Execution Hazards

The design team have highlighted unusual and significant risks only that may not be obvious to a competent contractor. They are to assist with risk reduction only and are not necessarily comprehensive. It is assumed that all works will be carried out by a competent contractor following good site management, site practice procedures, to an approved method statement (where appropriate) and in accordance with HSE guidance.

The proposed works are designed on a well established method of construction which can be carried out by a competent contractor. However, should the contractor find any area of concern he must inform the designer in order that appropriate action can be taken.

For significant hazards specific to this project see the following:

GENERAL NOTES:

- Principal Contractor to provide method statements for the safe working practice for: demolition, excavations, cutting of materials, support of adjacent structures, protecting personnel, neighbours & the public, working at height including crash bags & fall restraint systems.
- Principal Contractor to ensure Temporary Works Designer and Coordinator appointed for all propping works for structural alterations of existing building, including temporary guardrail and edge protection around voids and stairwells.
- This Designers Risk Assessment should be passed on to the Appointed Principal Designers and or Principal Contractor carrying out the next phase of works on this site.

INFORMATION

CDM - PRE-CONSTRUCTION INFO FROM CLIENT

CDM Information requested from client:  
1) Topographical Survey

Outstanding CDM information remains as residual risk, please request ARC appendix C for full list requested.

DESIGN INFORMATION

Further design info to be provided at subsequent stages of design / building regulations process

CONSTRUCTION RISKS

- WORKING AT HEIGHT
- LARGE / HEAVY GLAZING UNITS

MINIMUM FIRE & EMERGENCY EXPECTATIONS - FIRE RISK

- Principal contractor to comply with HSG158 Fire Safety in construction and undertake a fire risk assessment for the duration of the works including (but not limited to):
  - Lighting
  - Escape
  - Alarm
  - Temporary protection
  - Remote area access

UNKNOWN UNDERGROUND SERVICES

Location and nature of all existing underground services to be ascertained and mitigation / plan of works to be devised by specialist prior to commencement.

COMBUSTIBLE MATERIALS - FIRE RISK

Any combustible materials exposed in close proximity to a boundary are to be suitably protected to fire consultant requirement during construction and in use as per the "Pre Construction External Fire Spread Assessment". Works to be identified in the construction phase plan (Where EWS1 is required an appropriately qualified and insured consultant should be appointed to advise on external facade materials).

MAINTENANCE RISKS

CLEANING GUTTERS

Gutters to be cleaned from ground level by specialist using specialist equipment, e.g. long reach and clean systems where possible. Parapets and valleys to be accessed when required via scaffolding - to be assembled by a specialist.

IN - USE RISKS

END USER GUIDANCE FOR FUTURE WORKS

End user manual to ensure an awareness of any construction that must not be breached i.e. fire line to metal or timber frame buildings, in the event of future building works.

GAS PRESENCE

Potential for presence of Gas (various types) to be investigated. If present, specialist to provide design to negate.

DEMOLITION RISKS

REFURBISHMENT AND DEMOLITION SURVEY

Hazardous material survey to undertaken prior to any on site works commencing - including stripping out.

EXISTING WALLS OR PARTS OF BUILDINGS TO BE DEMOLISHED OR CONVERTED

Structural engineer to produce calculations and final design solution and consider with Principal contractor methods of temporary support / shoring up during construction- prior to any on site works commencing - including stripping out.
