

M ASJID ABU BAKR

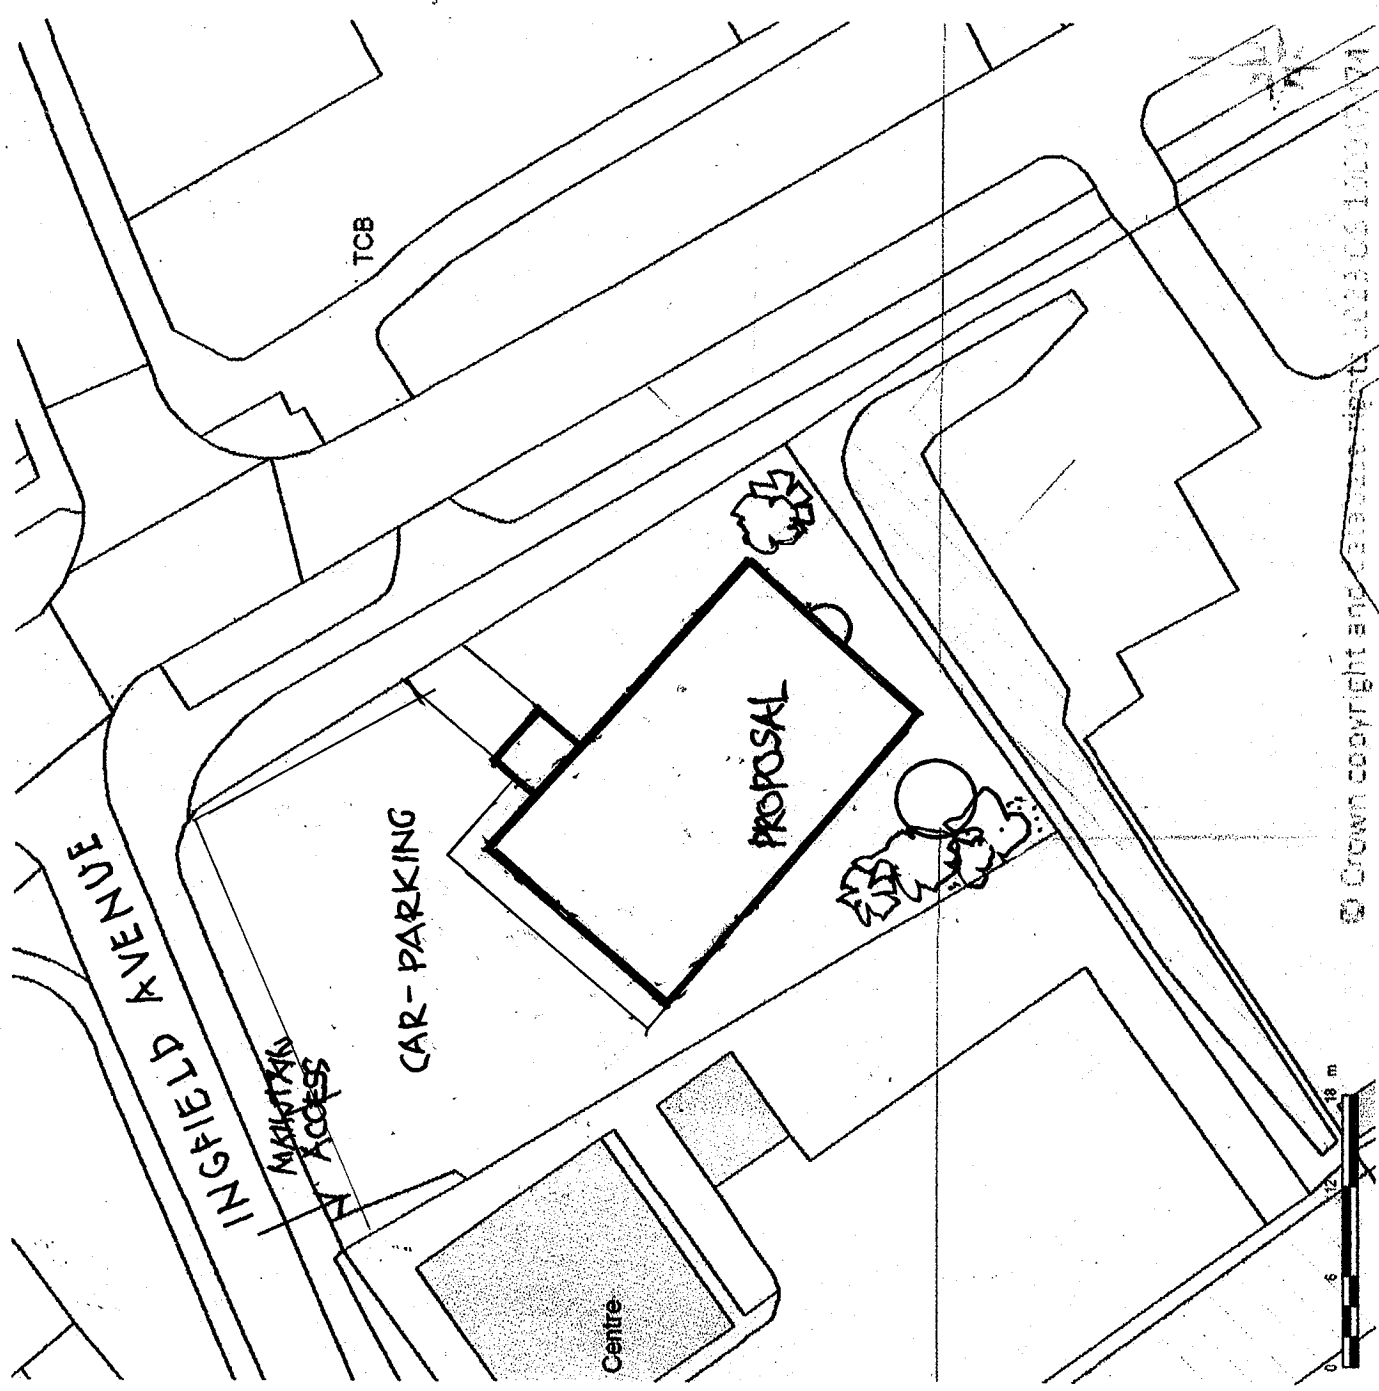

Proposed Masjid and community centre at Bawtry Road, Sheffield  
Sustainable Drainage System Report

The proposed site will utilise alternative surface water discharge systems. The proposal will incorporate rainwater harvesting connected to all rainwater fall pipes within the building. The existing site is totally dependant upon a mains drainage system with all existing drainage collected into the public sewer system. Our submission will incorporate landscaping, tree planting and a pond along with a gravel surfaced car parking area. The aim of our project will be to provide a development with minimal impact on surface water run-off and biodiversity benefits to the greater community. We propose that any planning permissions would be subject to a detailed scheme developed in conjunction with our Highways consultants and Landscaping consultants.
