T1 Cedar,

This tree has a number of storm damaged limbs, and few limbs that on east side grown close to property. Crown lift to 4m secondary & tertiary. Reduce back from tip to provide 2-3 m clearance from property. Remove snapped or split limbs.

T2 Thuja this tree would have been part of the original hedge line, but this elapsed tree/hedge has now grown out of control. Its multiple stems all situate on compression forks that are known for the weak and poor structural integral strength. The location cause continuing nuisance to the neighboring property. With little to non suitable management options available to retain this poor formed specimen in its location. Felling to ground level would be recommended.

Trees	works
T1 Birch	Fell
