

Overview of location photographs – Planning application 1 Plover close, BS22 8XB

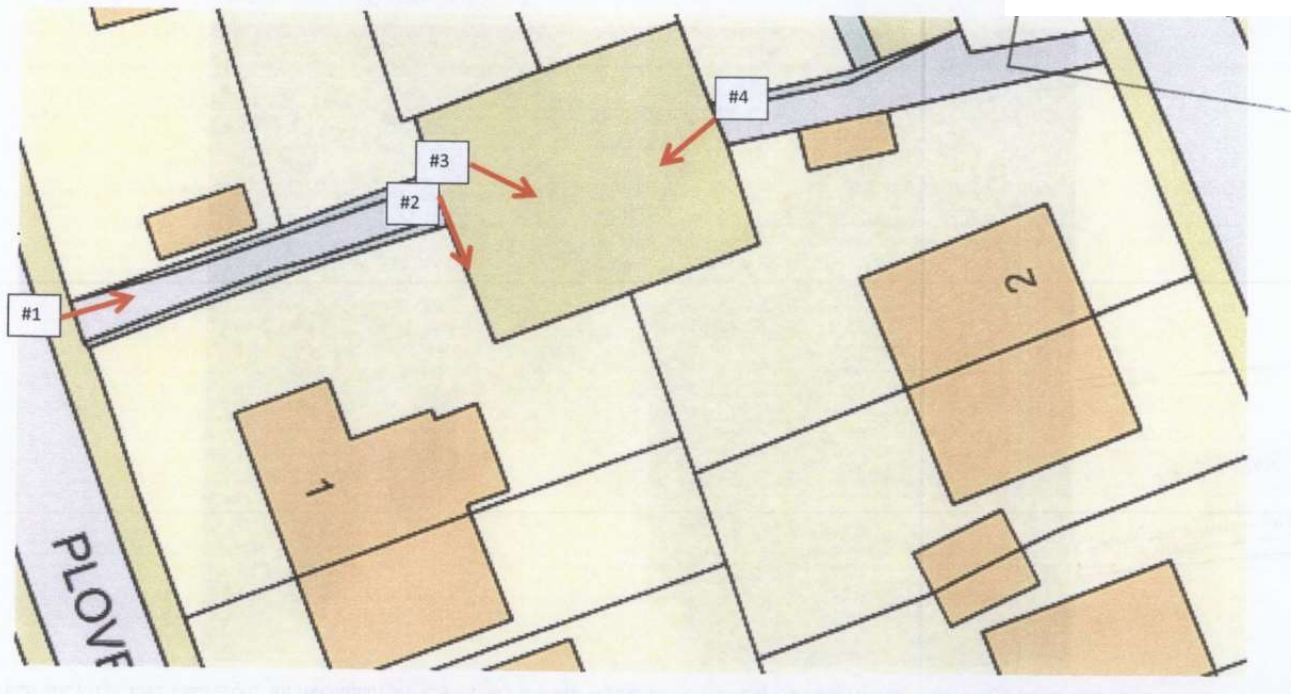

Photo #1: View from road outside 1 Plover close BS22 8XB, looking along boundary wall.

The concrete block wall is 1 Plover close. Under this proposal, this wall would be extended along the line of the footpath at a height equal to that shown or less than 2.0m, for maximum privacy. The new wall would be completely concrete block, without the terracotta house bricks.

Photo #2: View of existing boundary with 1 Plover close.

Under this proposal, these concrete block walls (only those present in this photo) would be removed after the new boundary wall is constructed.

Photo #3: Photo of existing boundary with 1 Plover close (Concrete block wall) and boundary with 2 Cormorant close (wooden fence)
Only the Concrete block wall boundary would be removed under this proposal, our neighbour's fence would remain.

Photo #4: Showing view of footpath and boundary wall. The new boundary wall would stop short of the line presented by the tarmac footpath.

Also note drain position. After a brief conversation with North Somerset's planning department we are happy to allow access to this within our property when necessary. We would cover it with a temporary (movable) cover (slabs, bird bath etc.). The rest of the slabbed area would be converted to garden, with due consideration for the drains when planting trees or landscaping work, etc..
